Il gruppo MOONIND, che vede insieme:
TRAMEC srl, BERMAR srl, MT MOTORI ELETTRICI srl e VARMEC srl vanta una presenza in ben 68 paesi nei 5 continenti per occupare una posizione di spicco nel settore.

The MOONIND Group, gathering together TRAMEC Srl, BERMAR Srl, MT ELECTRIC MOTORS, and VARMEC Srl, boasts a presence in 68 countries across 5 continents, which makes it a leading company in the industry.

Die MOONIND-Gruppe, zu der TRAMEC Srl, BERMAR Srl, MT ELECTRIC MOTORS und VARMEC Srl gehören, ist in 68 Ländern auf 5 Kontinenten vertreten und hat sich somit eine führende Position in der Branche erarbeitet.

Le aziende produttive del gruppo e le relative filiali rappresentano un vero e proprio presidio teritoriale di carattere commerciale e logistico ed affiancano il cliente con attività di pre e postvendita, partendo dalla fase di progettazione e coprendo l'intero ciclo di vita del prodotto.

The Group's manufacturing facilities together with the sales branches represent a real territorial presence which guarantees both sales and logistical support to customers through pre- and after-sales activities, starting from the design phase and covering the entire life cycle of the products being manufactured.

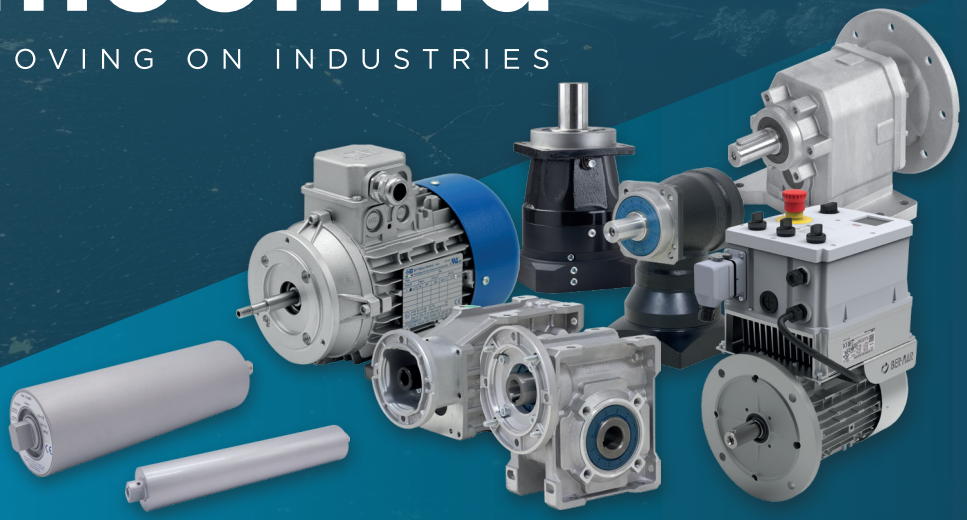
Die Produktionsgesellschaften der Gruppe sowie ihre Tochterunternehmen garantieren eine starke lokale Präsenz sowohl im kommerziellen als auch im logistischen Bereich. Sie unterstützen die Kunden mit umfassenden Leistungen vor und nach dem Verkauf, beginnend in der Entwurfsphase und begleitend den gesamten Produktlebenszyklus.

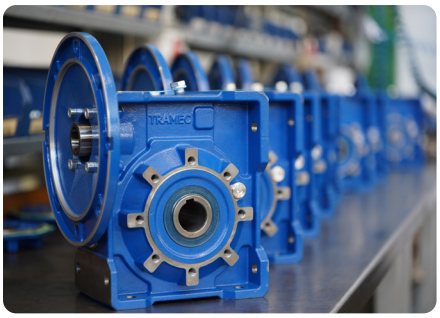
Questa organizzazione permette al gruppo di proporsi quale fornitore completo e versatile, in grado di realizzare personalizzazioni di prodotto su richiesta.
Un partner attento all'ascolto e in grado di proporre soluzioni adeguate alle esigenze del cliente. Siamo in grado di affrontare tempestivamente ed in modo altamente professionale le diverse sfide del mercato nel mondo delle trasmissioni meccaniche. Possiamo fornire soluzioni complete per l'automazione.

This organization allows the Moonind Group to present itself as a complete and dynamic supplier, capable of providing customized products based on customers' needs. We are able to deal promptly and professionally with the various challenges set by the market in the mechanical transmission related field. We can provide complete solutions for automation.

Dank dieser Struktur positioniert sich die Moonind-Gruppe als ein kompetenter und flexibler Anbieter, der in der Lage ist, Produkte exakt an die Bedürfnisse seiner Kunden anzupassen. Wir sind in der Lage, die vielfältigen Anforderungen des Marktes im Bereich der mechanischen Antriebstechnik schnell und professionell zu meistern. Unsere Lösungen für die Automatisierung sind ganzheitlich und auf die individuellen Bedürfnisse unserer Kunden abgestimmt.

moonind
MOVING ON INDUSTRIES





Vision aziendale

La filosofia di **TRAMEC** è da sempre incentrata sui seguenti punti cardine:
- Il perseguimento dell'eccellenza produttiva e qualitativa con una produzione rigorosamente **100% MADE IN ITALY**.
- Il fattore umano nel rapporto con i dipendenti, clienti e collaboratori.
- La ricerca continua di soluzioni innovative.

Company Vision

***TRAMEC**'s philosophy has always been centred on the following cornerstones:*
- *The pursuit of production and quality excellence with strictly **100%** production **MADE IN ITALY**.*
- *The human factor in the relationship with employees, customers and collaborators.*
- *The continuous search for innovative solutions.*

Unternehmensphilosophie

Die Philosophie von **TRAMEC** basiert seit jeher auf den folgenden Eckpfeilern:
- Das Streben nach hervorragender Produktion und Qualität mit konsequent **100% iger** Produktion **MADE IN ITALY**.
- Der menschliche Faktor im Umgang mit Mitarbeitern, Kunden und Kooperationspartnern.
- Die ständige Suche nach innovativen Lösungen.

Mission aziendale

- Essere un partner di riferimento a livello internazionale per la progettazione, realizzazione e commercializzazione di soluzioni avanzate ed affidabili nel settore delle trasmissioni di potenza.
- Fornire ai clienti un supporto rapido e puntuale, dalla fase di progettazione fino al post-vendita.
- Continuo miglioramento dei processi e prestazioni nel proprio Sistema di Gestione Integrata.

Company Mission

- *To be an international reference partner for the design, realisation and marketing of advanced and reliable solutions in the power transmission sector.*
- *Providing customers with fast and timely support, from the design phase to after-sales.*
- *Continuous improvement of processes and performance in its Integrated Management System.*

Mission des Unternehmens

- Ein internationaler Referenzpartner für die Planung, Realisierung und Vermarktung von fortschrittlichen und zuverlässigen Lösungen im Bereich der Energieübertragung zu sein.
- Schnelle und rechtzeitige Unterstützung der Kunden von der Entwurfsphase bis zum After-Sales-Service zu gewährleisten.
- Kontinuierliche Verbesserung der Prozesse und Leistungen im Rahmen des integrierten Managementsystems zu erzielen.

Ambiente, salute e sicurezza

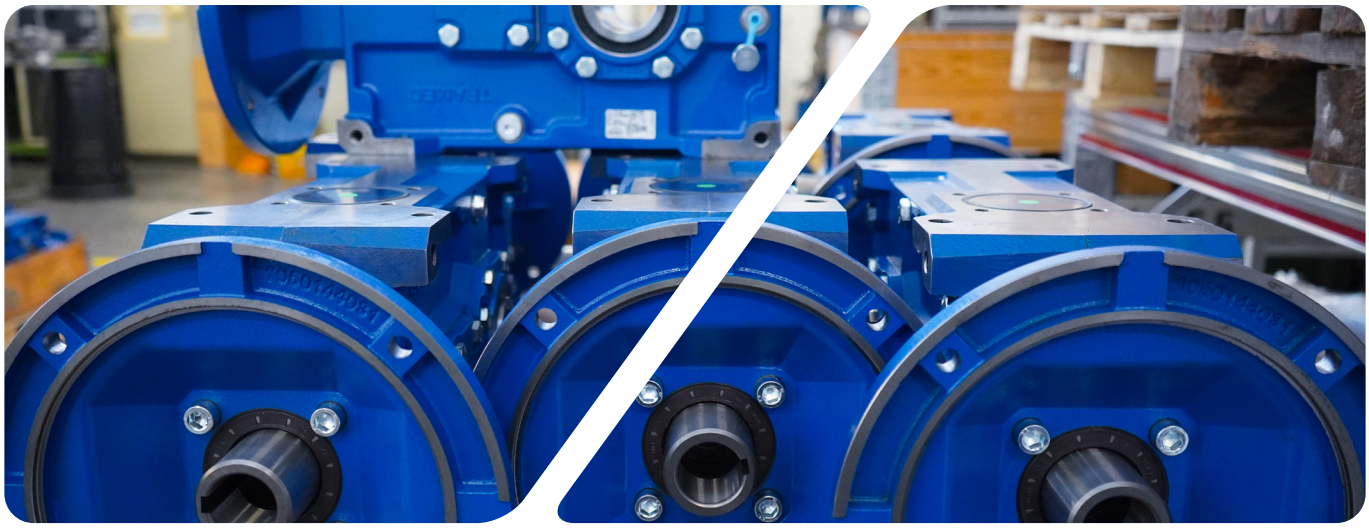
TRAMEC si distingue tramite una produzione che rispetta l'ambiente e si attiene alle direttive e alle norme nel rispetto di tutti gli stakeholders. Ciò significa la riduzione del consumo di materie prime, l'impiego efficiente dell'energia, l'utilizzo attento e responsabile delle sostanze inquinanti, la diminuzione dell'emissione dei rifiuti e l'attuazione di tutte le forme di sicurezza sul lavoro.

Environment, health and safety

***TRAMEC** distinguishes itself through environmentally friendly production and adheres to guidelines and standards in respect of all stakeholders. This means the reduction of raw material consumption, the efficient use of energy, and the careful and responsible use of pollutants, the reduction of waste emissions and the implementation of all forms of occupational safety.*

Umwelt, Gesundheit und Sicherheit

TRAMEC zeichnet sich durch eine umweltfreundliche Produktion aus und hält sich an Richtlinien und Standards gegenüber allen Beteiligten. Das bedeutet die Reduzierung des Rohstoffverbrauchs, die effiziente Nutzung von Energie und den sorgfältigen und verantwortungsvollen Umgang mit Schadstoffen, die Verringerung der Abfallemissionen und die Umsetzung aller Formen des Arbeitsschutzes.



Riduttori per ogni esigenza

TRAMEC nasce nel 1986 a Calderara di Reno, nel cuore della cosiddetta "*Motor Valley*", una porzione di territorio compresa tra Bologna e Modena celebre per essere la patria delle eccellenze del **MADE IN ITALY** nei settori automobilistico, motociclistico e della meccanica di precisione.

Fin dalla sua fondazione, **TRAMEC** si è specializzata nella produzione di riduttori ad ingranaggi ad alberi ortogonali, paralleli, pendolari e di rinvii angolari, ampliando nel tempo la propria gamma con nuove linee di prodotto come i riduttori epicicloidali di precisione ed i riduttori a vite senza fine. Successivamente l'offerta è stata ampliata con i motori elettrici e gli azionamenti per l'automazione.

L'obiettivo dell'azienda è quello di fronteggiare un mercato in continua evoluzione sul piano delle strategie di competitività qualitativa, economica e di presenza, attraverso un adeguato supporto offerto da tutti i propri reparti (produzione, tecnico e commerciale) e di una rete vendita ramificata e altamente competente.

Nel 2024, nasce il **gruppo MOONIND**: che vede insieme **TRAMEC, BERMAR**, **MT** e **VARMEC. MOONIND**: rappresenta la fusione di competenze complementari: dai riduttori di velocità ai motori elettrici, passando per i sistemi di motion control e le soluzioni innovative per la trasmissione di potenza. Con questo passaggio sinergico, non siamo più "solo" produttori di singoli componenti, ma un partner integrato in grado di offrirvi soluzioni complete per l'automazione industriale.

Gearboxes for every need

***TRAMEC** was founded in 1986 in Calderara di Reno, in the heart of the so-called "Motor Valley", a portion of territory between Bologna and Modena famous for being the home of **MADE IN ITALY** excellence in the automotive, motorbike and precision mechanics sectors.*

*Since its foundation, **TRAMEC** has specialised in the production of orthogonal, parallel and shaft-mounted gearboxes and bevel gearboxes, expanding its range over time with new product lines such as precision planetary gearboxes and worm gearboxes. Subsequently, the offer was expanded with electric motors and drives for automation.*

The company's aim is to cope with an ever-changing market in terms of qualitative, economic and presence competitiveness strategies through adequate support offered by all its departments (production, technical and commercial) and a branched and highly competent sales network.

*In 2024, the moonind group was born: which sees **TRAMEC, BERMAR, MT** and **VARMEC** together. **MOONIND**: represents the fusion of complementary skills: from speed reducers to electric motors, including motion control systems and innovative solutions for power transmission. With this synergistic step, we are no longer "only" manufacturers of individual components, but an integrated partner able to offer you complete solutions for industrial automation.*

Getriebe für jedes Bedürfnis

TRAMEC wurde 1986 in Calderara di Reno gegründet, im Herzen des so genannten"*Motor Valley*", einem Gebiet zwischen Bologna und Modena, das als Heimat der **MADE IN ITALY-Exzellenz** in den Bereichen Automobil, Motorrad und Feinmechanik bekannt ist.

Seit seiner Gründung hat sich **TRAMEC** auf die Herstellung von Kegelrad-, Stirnrad- und Aufsteckgetrieben sowie Winkelgetrieben spezialisiert und sein Angebot im Laufe der Zeit um neue Produktlinien wie Präzisionsplanetengetriebe und Schneckengetriebe erweitert. Später wurde das Angebot um Elektromotoren und Antriebe für die Automatisierung erweitert.

Das Ziel des Unternehmens ist es, einem sich hinsichtlich der Strategien qualitativer, wirtschaftlicher und präsenter Wettbewerbsfähigkeit ständig verändernden Markt durch angemessene Unterstützung aller Abteilungen (Produktion, Technik und Handel) und ein verzweigtes und hochkompetentes Vertriebsnetz zu stellen.

Im Jahr 2024 wurde die **MOONIND-Gruppe** gegründet, die **TRAMEC**, **BERMAR**, **MT** und **VARMEC** vereint. Moonind steht für die Fusion komplementärer Kompetenzen: von Getriebemotoren über Elektromotoren bis hin zu Motion-Control-Systemen und innovativen Lösungen für die Antriebstechnik.Mit diesem synergetischen Schritt sind wir nicht mehr „nur" Hersteller einzelner Komponenten, sondern ein integrierter Partner, der Ihnen komplette Lösungen für die industrielle Automatisierung anbieten kann.

Gamma prodotti

I prodotti **TRAMEC** coprono una vasta gamma di esigenze, e sono presenti in diverse applicazioni.

Robotica, automazione macchine utensili, macchine per la stampa, macchine automatiche per confezionamento ed imballaggio, manipolatori, macchine serigrafiche, guide lineari, macchine per lavorazione del legno sono alcuni degli esempi dove trovano utilizzo.

Product range

***TRAMEC** products cover a wide range of needs, and can be found in various applications.*

Robotics, machine tool automation, printing machines, automatic wrapping and packaging machines, manipulators, screen printing machines, linear guides, woodworking machines are some of the examples where they are used.

Produktbereich

Die Produkte von **TRAMEC** decken eine breite Palette von Bedürfnissen ab und sind in verschiedenen Anwendungen zu finden.

Robotik, Automatisierung von Werkzeugmaschinen, Druckmaschinen, automatische Verpackungsmaschinen, Manipulatoren, Siebdruckmaschinen, Linearführungen, Maschinen für die Holzbearbeitung sind einige Beispiele für die Anwendung.

Fattore di servizio | *Service factor* | Betriebsfaktor

Il fattore di servizio FS permette di qualificare, in prima approssimazione, la tipologia dell'applicazione tenendo conto della natura del carico (A, B, C), della durata di funzionamento h/gg (ore giornaliere) e del numero di avviamenti/ora. Il coefficiente così trovato dovrà essere uguale o inferiore al fattore di servizio del riduttore FS' dato dal rapporto fra la coppia nominale del riduttore T_{2M} indicata a catalogo e la coppia T_2' richiesta dall'applicazione.

*Service factor **FS** enables approximate qualification of the type of application, taking into account type of load (A,B,C), length of operation h/d (hours/day) and the number of starts-up/hour. The coefficient thus calculated must be equal to or lower than the gear unit service factor FS'*
which equals the ratio between T_{2M} (gear unit rated torque reported in the catalogue) and T_2' (torque required by the application).

$$FS' = \frac{T_{2M}}{T_2'} > FS$$

Der FS Betriebsfaktor ermöglicht die annähernde Bestimmung der Anwendungsart. Dabei werden Art der Last (A, B, C), Betriebsstunden pro Tag (S/T) und Anzahl der Starts pro Stunde berücksichtigt.
Der so ermittelte Koeffizient sollte dem Betriebsfaktor FS', der sich aus dem Verhältnis zwischen Nenndrehmoment des Getriebes T_{2M} (s. Katalog) und dem für die Anwendung erforderlichen Drehmoment T_2' ergibt, entweder entsprechen oder niedriger liegen.

I valori di FS indicati nella tab. 2, sono relativi all'azionamento con motore elettrico; se utilizzato un motore a scoppio, si dovrà tenere conto di un fattore di moltiplicazione 1.3 se a più cilindri e 1.5 se monocilindro.
Se il motore elettrico applicato è autofrenante, considerare un numero di avviamenti doppio di quello effetivamente richiesto.

FS values reported in table 2 refer to a drive unit equipped with an electric motor. If an internal combustion engine is used, a multiplication factor of 1.3 must be applied for a several-cylinder engine, 1.5 for a single- cylinder engine. If the electric motor is self-braking, consider twice the number of starts-up than those actually required.

Die FS Werte, die in Tabelle 2 angegeben werden, beziehen sich auf den Antrieb mit Elektromotor; falls ein Explosionsmotor verwendet wird, ist ein Multiplikationsfaktor von 1.3 für Mehrzylindermotor und von 1.5 für Einzylindermotor zu berücksichtigen . Falls der verwendete Elektromotor ein Bremsmotor ist, so ist die Zahl der tatsächlich erforderlichen Startvorgänge doppelt zu zählen.

Potenza

P = Potenza massima applicabile in entrata con vite ad albero maschio riferita alla velocità n_1 con un fattore di servizio FS = 1 e a un servizio continuo S1.

P_1 = Potenza motore consigliata riferita alla velocità n_1 con il fattore di servizio FS riportato in tabella a pag. A7 e a servizio continuo S1.

E' possibile determinare la potenza necessaria in entrata P' in base alla coppia T_2' richiesta all'applicazione secondo la seguente formula:

Power

P = max. power applicable at input with male worm shaft, referred to n_1 speed, service factor FS=1, on S1 continuous duty.

P_1 = recommended motor power, referred to n1 speed, service factor FS as reported in the table on page A7, on S1 continuous duty.

The necessary input power with regard to T_2 torque required by the application, is to be calculated with the following formula:

Leistung

P = am Antrieb max. anwendbare Leistung, mit Schneckenwellenzapfen bez. n_1 Antriebsdrehzahl, Betriebsfaktor FS=1 und S1 Dauerbetrieb.

P_1 = beratene Motorleistung bez. n_1 Drehzahl, FS Betriebsfaktor (wie es in der Tabelle auf Seite A7 angegeben wird) und S1 Dauerbetrieb.

Die am Antrieb erforderliche Leistung P' (auf Grund des von der Anwendung verlangten T_2 Drehmoments) kann wie folgt kalkuliert werden:

$$P' = \frac{T_2' \cdot n_2}{9550 \cdot Rd} \quad [kW]$$

Rapporto di riduzione

i_n = È il rapporto di riduzione della velocità, definito come:

Reduction Ratio

i_n= speed reduction ratio, defined as follows:

Untersetzungsverhältnis

i_n = Drehzahluntersetzungsverhältnis, wird wie folgt definiert:

$$i_n = \frac{n_1}{n_2}$$

Momento torcente

T_{2M} = È la massima coppia trasmissibile in uscita del riduttore con carico uniforme riferito alla velocità n_1 con un fattore di servizio FS =1 e a servizio continuo S1.
T_2 = È la coppia in uscita del motoriduttore riferita alla velocità n_1 alla potenza P_1, con il fattore di servizio FS riportato in tabella e a servizio continuo S1.

Torque

T_{2M} = max. torque transmissible at gearbox output with uniform load, referred to n_1 speed, service factor FS = 1, on S1 continuous duty.

T_2 = output torque transmissible to the geared motor, referred to n_1 speed, P_1 power , FS service factor as reported in the table, on S1 continuous duty.

Drehmoment

T_{2M} = am Getriebeabtrieb max. übertragbaren Drehmoment, bei gleichmäßiger Last bez. n_1 Drehzahl, Betriebsfaktor FS = 1 und S1 Dauerbetrieb.
T_2 = übertragbares Abtriebsdrehmoment, bezogen auf die Antriebsdrehzahl n_1, die Leistung P_1 und dem in der Tabelle angegebenen Betriebsfaktor FS bei Dauerbetrieb S1.

$$T_{2M} = \frac{9550 \cdot P_1 \cdot Rd}{n_2} \quad [Nm]$$

Rendimento

Rd - È il rendimento dinamico, definito come rapporto tra la potenza in uscita P_2 e quella in entrata P_1. Dipende principalmente dalla velocità di strisciamento, dal tipo di lubrificante e dall' angolo d'elica. I valori indicati nelle tabelle sono validi se si applica la corrispondente coppia in uscita. In fase di rodaggio, circa le prime 300 ore di funzionamento sotto carico, il valore deve essere considerato inferiore del 30% rispetto a quello indicato in tabella.

Rs - È il rendimento statico che si ha al momento dell' avviamento del riduttore e varia in base al rapporto di riduzione. Risulta importante, per una corretta valutazione del riduttore da impiegare, nelle applicazioni in cui non si raggiungono mai le condizioni di regime come nei funzionamenti intermittenti. Analogalmente al caso dinamico, anche il rendimento statico durante il rodaggio risulta inferiore del 30% rispetto al valore indicato in tabella.

Efficiency

***Rd** - dynamic efficiency, defined as the ratio between P_2 output power and P_1 input power. It mainly depends on the slipping speed, the type of lubricant and the lead angle. The values reported in the table are valid when the corresponding output torque is applied. During the first 300 operating hours under load, the value to be considered is 30% lower than that reported in the table.*

***Rs** - static efficiency at gearbox start-up; it changes depending on the reduction ratio.*
Rs value is important for selecting the right gearbox for applications where a steady state is never achieved, as for intermittent duty applications. Same as dynamic efficiency, static efficiency too during the running-in period will be 30% lower than the value reported in the table.

Wirkungsgrad

Rd - dynamischer Wirkungsgrad, ist das Verhältnis zwischen P_2 Abtriebsleistung und P_1 Antriebsleistung. Rd Wert wird durch Gleitgeschwindigkeit, Art des Schmiermittels und Steigungswinkel beeinflusst. Die Tabellen zeigen die Werte die gültig sind wenn das entsprechende Abtriebsdrehmoment gegeben ist. Während der Einlaufszeit in den ersten 300 Betriebsstunden unter Belastung, ist dieser Wert 30% niedriger als der in der Leistungstabelle angegebenen Wert.

Rs - statischer Wirkungsgrad beim Getriebestart und in Abhängigkeit zur Untersetzung..
Der Wert Rs ist wichtig für die Auswahl des richtigen Getriebes für Anwendungen wo ein stetiger Betrieb nicht auftritt, wie bei Anwendungen mit Aussetzbetrieb. Der statischer Wirkungsgrad auch während der Einlaufszeit wird 30% niedriger als der in der Tabelle angegebenen Wert.

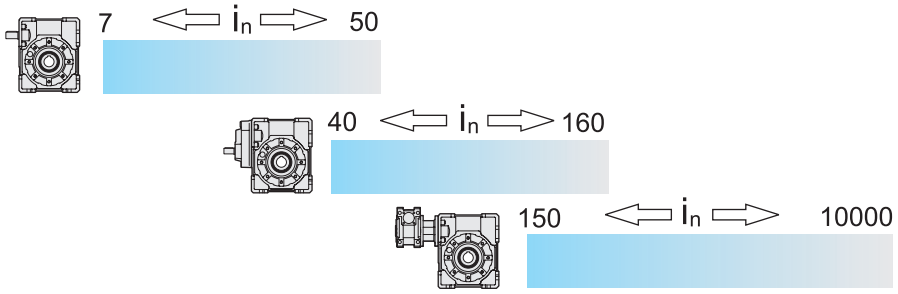
Stabilito il rapporto di riduzione necessario all'applicazione, dove è possibile, è consigliabile utilizzare i diversi tipi di riduttori che offrono, a parità di rapporto, un migliore rendimento dinamico.

Once the reduction ratio required by the application has been established, it is advisable to select a type of gearbox which, ratio being equal, offers better dynamic efficiency.

Nachdem das für die Anwendung erforderliche Untersetzungsverhältnis festgestellt worden ist, wählen Sie bei gleichem Untersetzungsverhältnis einen Getriebetyp, den einen besseren dynamischen Wirkungsgrad aufweist.



Irreversibilità

Nelle applicazioni dove è necessario evitare la trasmissione del moto retrogrado o sostenere il carico, in assenza di alimentazione elettrica, è consigliabile adottare freni esterni.
Nei riduttori a vite senza fine emerge questa caratteristica naturale, denominata grado di irreversibilità, che cresce con l'aumentare del rapporto di riduzione in quanto strettamente legata al relativo rendimento.

Per ottenere alti gradi di irreversibilità occorre quindi adottare i rapporti di riduzione più elevati, senza dimenticare che, il rendimento, tende a crescere durante le prime 500 ore di funzionamento per poi stabilizzarsi sui valori riportati a catalogo.

Irreversibilità statica

Condizione di impedimento alla rotazione comandata dall'albero lento senza escludere possibili ritorni lenti nel caso in cui il carico sia sottoposto a vibrazioni.

Rs < 0.45 si ha irreversibilità
Rs = 0.45 ÷ 0.55 irreversibilità incerta
Rs > 0.55 si ha reversibilità

Irreversibilità dinamica

Condizione di arresto e quindi di sostegno del carico nel momento in cui cessa l'azione di comando. La condizione è più difficile da ottenere in quanto viene influenzata dal rendimento dinamico, dalla velocità di rotazione, da eventuali vibrazioni che il carico può generare e dalla direzione del movimento rispetto al carico.

Quest'ultima condizione è molto evidente nei sollevamenti:
un carico in salita, cessando l'azione di comando, deve arrestarsi e quindi assumere velocità zero (rendimento statico) prima di invertire il moto e cadere per gravità.

Un carico in discesa tende invece a proseguire nel suo moto ostacolato, nella caduta, dal solo rendimento dinamico.

Rd < 0.45 si ha irreversibilità
Rd = 0.45 ÷ 0.55 irreversibilità incerta
Rd > 0.55 si ha reversibilità

Irreversibility

The use of external brakes is advised in case of applications where backwards motion must be hindered and the load must be held should the feed be cut off.

Some worm gearboxes feature natural irreversibility. The higher the ratio, the higher is the irreversibility, since it is strictly dependent on the relative efficiency.

In order to achieve high irreversibility it is therefore necessary to select higher efficiency reduction ratios not to forget that the efficiency is growing during the first 500 hours life until it stabilizes to the values mentioned in the catalogue.

Static irreversibility

Static irreversibility occurs when the rotation controlled by the output shaft is hindered; possible slow returns cannot be excluded should the load be subject to vibrations.

Rs < 0.45 *provides irreversibility*
Rs = 0.45 ÷ 0.55 *irreversibility is uncertain*
Rs > 0.55 *reversibility is possible*

Dynamic irreversibility

Dynamic irreversibility is characterized by stillstand and hold of the load when the drive stops.
It is more difficult to achieve this condition because it is influenced by dynamic efficiency, speed of rotation and possible vibrations generated by the motion direction with regard to the load.

This last condition is much more evident during the lifting : if the drive stops during the lifting of the load this has to come to a speed equals to zero (static irreversibility) before the reversal of motion rotation and its drop for gravity.

On the contrary the load during its descent gets its motion obstructed by its dynamic efficiency.

Rd < 0.45 *provides irreversibility*
Rd = 0.45 ÷ 0.55 *irreversibility is uncertain*
Rd > 0.55 *reversibility is possible*

Selbsthemmung

Aussenbremsen sind bei Anwendungen zu benutzen, bei denen Rückbewegung vermeiden werden muss oder die Last auch im Falle von Fehlen an Speisung gehalten werden muss.
Einige Schneckengetriebe sind selbsthemmend. Je höher die Untersetzung ist, desto höher ist die Selbsthemmung, da diese stark vom jeweiligen Wirkungsgrad abhängig ist. Um eine höhere Selbsthemmung zu erreichen, wählen Sie bitte höhere Untersetzungsverhältnisse.
Bitte beachten Sie, dass der Wirkungsgrad der Getriebe in den ersten 500 Betriebsstunden ansteigt und sich erst anschließend auf die im Katalog angegebenen Werte stabilisiert.

Statische Selbsthemmung

Statische Selbsthemmung liegt vor, wenn die von Abtriebswelle gesteuerten Drehung gehindert wird. Langsamer Rücklauf ist möglich, falls die Last Schwingungen ausgesetzt wird.

Rs < 0.45 es liegt Selbsthemmung vor
Rs = 0.45 ÷ 0.55 ungewisse Selbsthemmung
Rs > 0.55 es liegt Reversibilität vor

Dynamische Selbsthemmung

Stillstand und Stütze der Last beim Aussetzen der Steuerung.
Diese Bedingung ist schwieriger zu erreichen, da sie vom dynamischen Wirkungsgrad, der Drehzahl und von der Last verursachten möglichen Vibrationen abhängig ist

Dieser letzte Fall kommt bei Hubanwendungen stark zu tragen. Wenn der Antrieb während dem Hub stoppt, muss die Last eine Geschwindigkeit von annähernd null erreichen (statische Irreversibilität), bevor die Rotation sich umkehrt und die Last durch die Gravitation nach unten fährt.
Dem entgegengesetzt bekommt die Last durch die Abwärtsbewegung Ihre dynamische Effizienz.

Rd < 0.45 es liegt Selbsthemmung vor
Rd = 0.45 ÷ 0.55 ungewisse Selbsthemmung
Rd > 0.55 es liegt Reversibilität vor

Gioco angolare — *Backlash* — Winkelspiel

Misurato bloccando l'albero entrata, e ruotando l'albero uscita nelle due direzioni applicando la coppia strettamente necessaria a creare il contatto tra i denti degli ingranaggi, al massimo pari al 2% della coppia nominale (T_{2M}).

Angular backlash measured after having blocked the input shaft by rotating output shaft in both directions and applying the torque which is strictly necessary to create a contact between the teeth of the gears. The applied torque should be at most 2% of the max. torque (T_{2M}).

Nachdem die Antriebswelle blockiert worden ist, darf das Winkelspiel auf die Abtriebswelle bemesst werden. Dabei soll die Antriebswelle in beiden Richtungen gedreht werden und ein Drehmoment ausgeübt werden, das zur Entstehen eines Kontaktes zwischen den Zaehnen genuegt. Das ausgeübte Drehmoment soll höchstens 2% des max. von Getrieben garantierten Drehmoment (T_{2M}) sein.

Gioco angolare ridotto — *Reduced Backlash* — Reduziertes Winkelspiel

I giochi angolari ridotti esposti in tabella si possono ottenere solo costruendo corone speciali. Da notare che l'usura dovuta al funzionamento rende la versione con gioco ridotto di durata limitata direttamente proporzionale al fattore di servizio (fs) dell'applicazione: più il riduttore è sovradimensionato e maggiore è la durata del gioco ridotto.

The reduced angular clearance shown in the table can only be obtained by building special crowns. It must be noted that the wear due to operation makes the version with reduced clearance of limited duration directly proportional to the service factor (fs) of the application: the more oversized the reducer, the longer the duration of the reduced backlash.

Die in der Tabelle angegebenen reduzierten Winkelspiele können nur erzielt werden, wenn spezielle Kränze hergestellt werden. Es muss hervorgehoben werden, dass der durch den Betrieb bewirkte Verschleiß bei der Version mit reduziertem Spiel eine zum Betriebsfaktor (fs) der Anwendung direkt proportionale Dauer aufweist: Je größer das Getriebe ist, desto länger dauert das reduzierte Spiel.

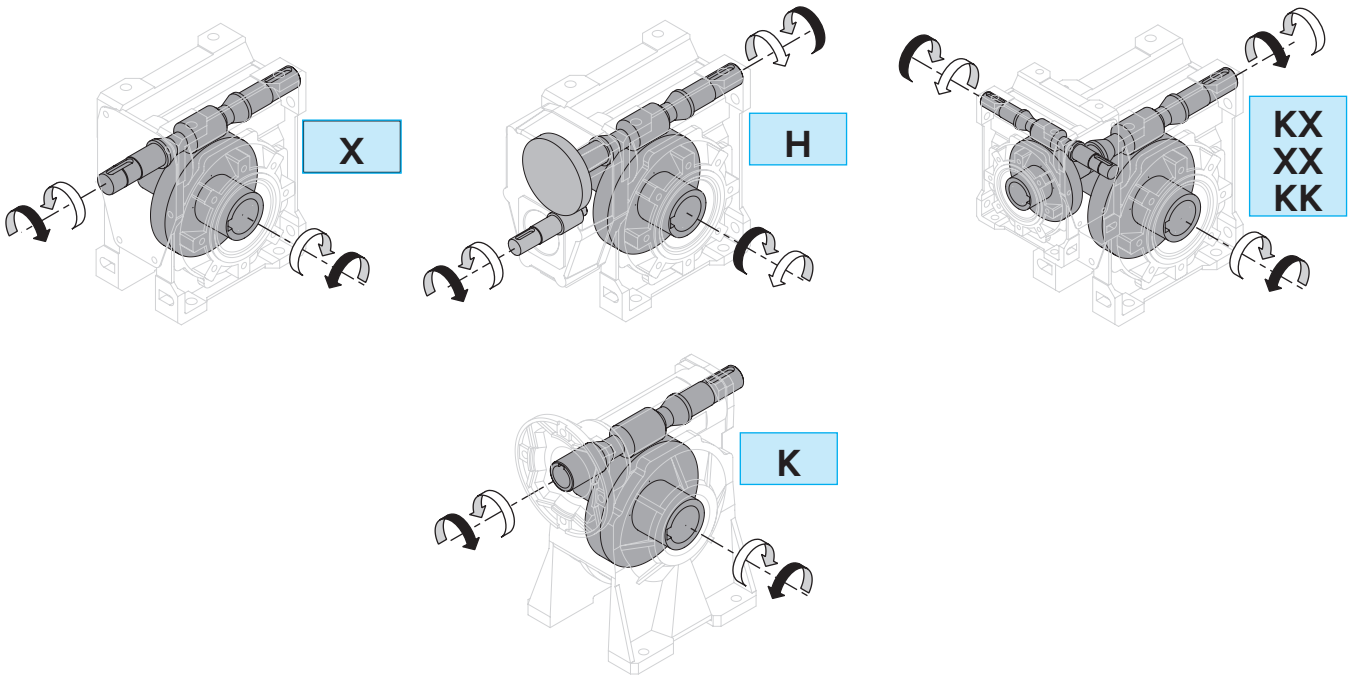
Senso di rotazione | *Direction of rotation* | Drehrichtung



Carichi radiali | *Radial load* | Radialbelastungen

Ogni tipo di organo di trasmissione che viene collegato o sull'albero in entrata o in quello di uscita determina carichi radiali rispettivamente F_{R1} e F_{R2}.
I valori riportati in tabella in funzione delle varie velocità in entrata e in uscita sono da considerarsi applicabili come forza agente a metà della sporgenza; per un posizionamento a 1/3 della lunghezza occorre aumentare i valori di tabella del 25% mentre per un posizionamento a 2/3 della lunghezza occorre diminuire gli stessi valori del 25%.
I valori dei carichi assiali applicabili in entrata F_{A1} e in uscita F_{A2} sono indicati nelle tabelle.
Negli alberi bisporgenti, ogni estremità può sopportare un carico radiale pari ai 3/5 dei valori riportati in tabella purchè agiscano nello stesso senso e siano di pari intensità

Any transmission device coupled to either the input or to the output shaft generates radial loads, F_{R1} and F_{R2} respectively.

The load values reported in the table, depending on input and output speed, are to be considered as acting at the half-way point of the projection; if the load is applied at 1/3 of the projection, increase the values in the table by 25%; if the load is applied at 2/3, reduce the values by 25%.
Axial loads applicable at input F_{A1} and at output F_{A2} are reported in the tables. With regard to double projecting shafts, each end can sustain a radial load which equals 3/5 of the values listed in the table, on condition that they act in the same direction and have the same intensity.

Antriebsorgane, die mit der Antriebs- oder Abtriebswelle verbindet werden, bewirken Radialbelastungen (F_{R1} und F_{R2} beziehungsweise).
Die in der Tabelle nach Antriebs-und Abtriebsdrehzahl angegebenen Werte beziehen sich auf Belastungen, die in der Mitte der herausragenden Welle wirken; falls die Belastungen auf 1/3 der Länge wirken, sollen die in der Tabelle angegebenen Werte um 25% erhöht werden; falls sie auf 2/3 der Länge wirken, sollen die Werte der Tabelle um 25% reduziert werden.
Die Werte der anwendbaren Axialbelastungen (F_{A1} am Antrieb und F_{A2} am Abtrieb) werden in den Tabellen angegeben.
Bei doppelseitig herausragenden Wellen darf die Radialbelastung auf jedes Ende 3/5 der nachstehenden Werte betragen, unter die Bedingung dass Stärke und Richtung gleich sind.

Versioni rinforzate

A richiesta vengono fornite versioni rinforzate con cuscinetti a rulli conici sulla corona in grado di sopportare carichi superiori rispetto a quelli ammessi nelle versioni normali con cuscinetti radiali a sfere.
Essendo tali valori calcolati in funzione della durata dei cuscinetti, occorre valutare attentamente il tipo di versione più idoneo in modo da evitare problemi di tipo strutturale. In particolare, il carico assiale deve agire in modo da comprimere la flangia uscita.
I carichi assiali e radiali riportati in tabella non possono agire contemporaneamente nei loro valori massimi.
Nel caso di eventuale concorrenza delle due forze, queste devono essere limitate in rapporto al tipo di carico prevalente:

1. condizione di prevalenza del carico radiale:

F_{R2} = come a tabella
$F_{A2} = F_{R2} \cdot 0.37$

2. condizione di prevalenza del carico assiale:

$F_{A2}' = F_{A2} \cdot 0.6$
$F_{R2}' = F_{A2} \cdot 0.4$

Reinforced versions

The versions reinforced with tapered roller bearings on the worm wheel are available on request. They can bear higher loads compared to standard versions with radial ball bearings. These values are calculated in relation of the life of bearings therefore it is necessary to select the most suitable version in order to avoid any structural problem.
In particular the axial load must compress the output flange.

The axial and radial loads shown in the table do not have to act simultaneously according to the max. values.

In case of concurrency of both forces these have to be reduced with regard to the prevailing type of load:

1. prevalence of radial load:

F_{R2} = *as per table*
$F_{A2} = F_{R2} \cdot 0.37$

2. prevalence of axial load:

$F_{A2}' = F_{A2} \cdot 0.6$
$F_{R2}' = F_{A2} \cdot 0.4$

Versionen mit Kegelrollenlager

Auf Wunsch können Versionen mit Kegelrollenlager auf dem Schneckenrad geliefert werden. Sie erlauben höheren Lasten in Vergleich zu den Standardprodukten mit Schrägkugellagern.
Diese Werte sind entsprechend der Lebensdauer der Lager berechnet. Daher ist es erforderlich, die am besten passende Ausführung zu wählen, um Probleme zu vermeiden. Auf alle Fälle muss die Axialbelastung den Abtriebsflansch zusammendrücken.
Die in der Tabelle angegebenen Maximalwerte der Axial - und Radialbelastung sollten nicht gleichzeitig auftreten.
Falls Axial-und Radialbelastungen auftreten, sollte jene Belastungsrichtung zur Auswahl herangezogen werden, die vom Anteil überwiegt:

1. radialbelastungen überwiegen:

F_{R2} = siehe Tabelle
$F_{A2} = F_{R2} \cdot 0.37$

2. Axialbelastungen überwiegen

$F_{A2}' = F_{A2} \cdot 0.6$
$F_{R2}' = F_{A2} \cdot 0.4$

Potenza Termica

Nelle tabelle riportate nelle sezioni relative ad ogni tipologia di riduttore sono indicati i valori della potenza termica nominale P_{t0} (kW). Tale valore rappresenta la potenza massima applicabile all'entrata del riduttore, in servizio continuo a temperatura ambiente di 30°C, così che la temperatura dell'olio non oltrepassi il valore di 95°C, valore massimo ammesso nel caso di prodotti standard.

Il valore di P_{t0} non deve essere preso in considerazione se il funzionamento è continuo per un massimo di 1.5 ore seguito da pause di durata sufficiente (circa 1 – 2 ore) a ristabilire nel riduttore la temperatura ambiente.

I valori di P_{t0} devono essere corretti tramite i seguenti coefficienti, così da considerare le reali condizioni di funzionamento, ottenendo i valori di potenza termica corretta P_{tc}.

Thermal power

The different sections dedicated to each type of gearbox contain tables reporting the values of rated thermal power P_{t0} (kW). Reported values correspond to the maximum admissible power at gearbox input, on continuous duty and with ambient temperature of 30°C, so that oil temperature does not exceed 95°C, which is the max. admissible value for standard products.

***P_{t0} value should not be taken into account** in case of continuous duty for max. 1.5 hours followed by pauses which are long enough to bring the gearbox back to ambient temperature (roughly 1 – 2 hours).*

In order to comply with the actual operating conditions, Pt0 values should be corrected with the following coefficients, thus obtaining the values of corrected thermal power P_{tc}.

Thermische Leistung

Für jeden Getriebetyp gibt es Tabellen, die die Nennwerte der thermischen Leistung Pt0 (kW) angeben. Die angegebenen Werte stellen die max. anwendbare Antriebsleistung der Getriebe im Dauerbetrieb mit einer Umgebungstemperatur von max. 30°C dar, sodass die Öltemperatur unter 95°C bleibt (max. Wert für Standardprodukte).

P_{t0} Wert darf nicht betrachtet werden, falls Dauerbetrieb max. 1.5 Stunden dauert und von Stillstand gefolgt wird, der lang genug ist, damit das Getriebe zur Umgebungstemperatur zurück kommt. (ungefähr 1 – 2 Stunden).

P_{t0} Werte sollen durch die folgenden Koeffizienten verbessert werden, Damit die reellen Betriebsbedingungen wirklich in Betracht gezogen werden. Mit der folgenden Formel erhält man die Werte der korrekten thermischen Leistung P_{tc}.

$$P_{tc} = P_{t0} \cdot ft \cdot fv \cdot fu \quad (kW)$$

Dove:
ft = coefficiente di temperatura (v. tab. 3)

Where:
***ft** = temperature coefficient (see table 3)*

Dabei ist:
ft = Temperaturkoeffizient (siehe Tabelle 3)

Tab. 3

Ta (°C)	0	5	10	15	20	25	30	35	40	45	50
ft	1.46	1.38	1.31	1.23	1.15	1.1	1	0.92	0.85	0.77	0.69

(Dove Ta (°C) è la temperatura ambiente)

fv = coefficiente di ventilazione
- fv= 1.45 con ventilazione forzata efficace con ventola dedicata
- fv= 1.25 con ventilazione forzata secondaria ad altri dispositivi (pulegge, ventole motore, ecc.)
- fv= 1 refrigerazione naturale (situazione standard)
- fv= 0.5 in ambiente chiuso e ristretto (carter)

fu = coefficiente di utilizzo (v. tab. 4)

(Ta (°C) is the ambient temperature)

***fv** = cooling coefficient*
- *fv= 1.45 forced cooling with specific fan*
- *fv= 1.25 forced cooling secondary to other devices (pulleys, motor fans, etc)*
- *fv= 1 natural cooling (standard)*
- *fv= 0.5 in a closed and narrow environment*

***fu** = utilization coefficient (see table 4)*

(Ta (°C) ist die Umgebungstemperatur)

fv = Luftkühlungskoeffizient
- fv= 1.45 Drucklüftung mit Sonderlüfterrad
- fv= 1.25 Drucklüftung nebensächlich zu anderen Vorrichtungen (Scheiben, Motorlüfterräder, usw.)
- fv= 1 natürliche Lüftung (Standard)
- fv= 0.5 in engem und geschlossenem Raum

fu = Verwendungskoeffizient (siehe Tabelle 4)

Tab. 4

Dt (min)	10	20	30	40	50	60
fu	1.6	1.35	1.2	1.1	1.05	1

Dove Dt sono i minuti di funzionamento in un'ora

Dt is minutes of operation per hour

Dt steht für Betriebsminuten pro Stunde

Selezione

Scelta riduttore

A) n_1 = 1400, 2800, 900, 500 rpm
Si sceglierà nelle tabelle delle prestazioni dei riduttori un gruppo che in corrispondenza di un rapporto prossimo a quello calcolato ammetta una potenza:

Scelta del motoriduttore

B) FS = 1
Si cercherà nelle tabelle della prestazioni dei motoriduttori un gruppo la cui potenza P1 corrisponda alla P' calcolata.

C) FS ≠ 1
La scelta dovrà essere effettuata come al punto A) verificando che la grandezza del motore da installare sia compatibile con quelle ammesse dal riduttore (IEC); ovviamente la potenza installata dovrà corrispondere al valore P' richiesto.

Determinato il riduttore idoneo è necessario verificare che anche gli eventuali carichi aggiuntivi (radiali ed assiali) agenti sugli alberi in uscita e/o entrata rientrino nei valori ammissibili dati a catalogo.
In determinate condizioni applicative può diventare necessario verificare che la potenza assorbita dal riduttore non superi quella del limite termico riportata a catalogo, secondo quanto riportato a pag. A17 relativamente alla potenza termica.

Selection

Selecting a gearbox

A) n_1 = 1400, 2800, 900, 500 rpm
Consult the gear unit efficiency table; select a group whose ratio is close to the calculated ratio and which permits power:

P ≥ P' x FS

Selecting a gearmotor

B) FS = 1
Consult the gear motor efficiency table and select a group having power P1 corresponding to calculated P'.

C) FS ≠ 1
Follow the instructions at point A), checking that the size of the motor to be installed is compatible with the gear unit (IEC); obviously, installed power must correspond to the required P' value.

After having selected the proper gearbox, it is necessary to check out that possible additional loads (radial or axial) on the input and /or output shafts fall within the values reported in the catalogue.
Depending on the application, it might be necessary to check that the power absorbed by the gearbox does not exceed the thermal power limit reported in the catalogue as page A17.

Wahl

Wahl des Getriebes

A) n_1 = 1400, 2800, 900, 500 rpm
Aus der Tabelle der Leistungen der Untersetzungsgetriebe wählt man eine Baugruppe aus, die ein ähnliches Untersetzungsverhältnis zu dem berechneten Wert aufweist und die die folgende Leistung zulässt:

Wahl des Getriebemotors

B) FS = 1
In den Leistungstabellen der Getriebemotoren sucht man eine Baugruppe, deren Leistung P1 der berechneten Leistung P' entspricht.

C) FS ≠ 1
Die Auswahl wird wie unter A) getroffen, wobei zu ueberpruefen ist, ob die Größe des zu installierenden Motors mit dem Untersetzungsgetriebe kompatibel ist (IEC); selbstverständlich muß die Einbauleistung dem erforderlichen Wert P' entsprechen.

Nachdem das geeignete Getriebe gewählt worden ist, muss es sichergestellt werden, das zusätzlichen Radial-oder Axialbelastungen auf die Antriebs-oder Abtriebswelle unter den im Katalog gegebenen Werten fallen. Abhängig von der Art der Anwendung ist es manchmal zu prüfen, dass die von Getriebe absorbierten Leistung unter der Wert der thermischen Leistung liegt, wie es in dem Katalog angegeben wird (Seite A17).

Lubrificazione

Tutti i riduttori, eccetto X130 e K130, sono forniti completi di lubrificante sintetico a base PAG con indice di viscosità ISO VG320.

I cuscinetti dell'albero veloce vengono sempre lubrificati con grasso a base sintetica per tutte le posizioni di montaggio, solamente per le posizioni di montaggio B6 – B7, per una corretta lubrificazione, vengono ingrassati anche i cuscinetti dell'albero lento. Questo significa che solamente dalle posizioni di montaggio B6 – B7 si può passare a tutte le altre posizioni, modificando esclusivamente le quantità di olio, come indicato nelle relative tabelle; per quanto riguarda invece le posizioni di montaggio B3 – B8 – V5 – V6, possono essere intercambiabili solo tra di loro, senza modificare le quantità di olio.

Attenzione! per i riduttori a vite senza fine con precoppia HA – HF , la posizione di montaggio V5 non può essere intercambiabile con nessun'altra posizione; per quanto riguarda l'ingrassaggio dei cuscinetti dei riduttori combinati, la posizione di montaggio deve essere riferita al singolo riduttore.

Una scelta oculata del tipo di lubrificante, in funzione delle condizioni operative e ambientali, consente ai riduttori di raggiungere le prestazioni ottimali.

Le prestazioni dei riduttori indicate nelle tabelle dei dati tecnici sono state calcolate considerando l'impiego di olio sintetico.

VISCOSITA'

E'uno dei parametri più importanti da considerare nella scelta di un olio ed è influenzabile da diversi parametri quali velocità, temperatura. Riportiamo sinteticamente le valutazioni generali per la scelta della giusta viscosità:

Viscosità alta
Usare per basse velocità di rotazione e/o temperature alte. (Una viscosità troppo bassa in queste condizioni operative causa una usura precoce).

Viscosità bassa
Usare per alte velocità di rotazione e/o temperature basse.
(Una viscosità troppo elevata provoca diminuzione del rendimento e surriscaldamento).

Lubrication

All worm gearboxes, except for the type X130 and K130, are supplied with synthetic lubricant, PAG base, viscosity index ISO VG 320.

The bearings mounted on the input shaft are always supplied with synthetic -base grease for all mounting positions. For mounting positions B6 - B7, the output shaft bearings are also greased to ensure correct lubrication. This means that it is possible to switch from the mounting positions B6 - B7 to all the other positions, changing only the quantities of oil specified in the corresponding tables. Mounting positions B3 - B8 - V5 - V6 can be exchanged without changing the oil quantity.

***Caution!** for worm gearboxes with HA - HF pre-stage, the V5 mounting position cannot be interchangeable with any other position; as regards the greasing of the bearings of the combined gearboxes, the mounting position must refer to the single reducer.*

Choose the lubricant according to operating and ambient conditions in order to ensure high gear unit performance.

Performance data, as shown in the specifications tables, refer to utilization of synthetic oil.

VISCOSITY

It is the most important parameter to be considered when selecting an oil; it depends on various factors such as speed and temperature. Following are general guidelines for choosing the correct viscosity:

High viscosity
To be used for low rotation speed and/ or high temperatures. (Under these operating conditions a low viscosity causes premature wear).

Low viscosity
To be used for high rotation speed and/ or low temperatures.
(High viscosity reduces efficiency and causes overheating).

Ölschmierung

Alle Schneckenradgetriebe mit Ausnahme der Ausführung X130 und K130, werden mit synthetischem Schmiermittel auf PAG Basis und Viskosität Index ISO VG 320 geliefert.

Die auf der Eingangswelle montierten Lager werden für alle Einbaulagen immer mit synthetischem Grundfett geliefert. Für die Einbaulagen B6 - B7 werden die Ausgangswellenlager ebenfalls gefettet, um eine korrekte Schmierung zu gewährleisten. Dies bedeutet, dass nur von den Montagepositionen B6 - B7 aus auf alle anderen Positionen gewechselt werden kann, wobei nur die in den entsprechenden Tabellen angegebenen Ölmengen geändert werden. Die Einbaulagen B3 - B8 - V5 - V6 können untereinander ausgetauscht werden, ohne die Ölmenge zu verändern.

Achtung! Bei Schneckengetrieben mit HA-HF-Vorstufe kann die V5-Einbaulage nicht mit einer anderen Position ausgetauscht werden. Bezüglich der Schmierung der Lager der kombinierten Getriebe muss sich die Einbaulage auf das einzelne Getriebe beziehen.

Das Untersetzungsgetriebe wird optimal arbeiten, wenn das richtige Schmiermittel je nach Betriebs- und Umgebungsbedingungen sorgfältig ausgewählt wird.

Daten über Getriebeleistung, wie es in den Tabellen der technischen Daten angegeben wird, beziehen sich auf Schmierung mit synthetischem Öl.

VISKOSITÄT

Die Viskosität ist eines der wichtigsten Merkmale, die bei der Auswahl des richtigen Öls zu beachten sind; sie wird von verschiedenen Parametern wie Geschwindigkeit und Temperatur beeinflußt. Im folgenden fassen wir die wichtigsten allgemeinen Hinweise für die Wahl der richtigen Viskosität zusammen:

Hohe Viskosität
Geeignet für niedrige Drehzahlen bzw. hohe Temperaturen. (Eine zu geringe Viskosität verursacht unter diesen Betriebsbedingungen frühen Verschleiß).

Geringe Viskosität
Geeignet für hohe Drehzahlen bzw. niedrige Temperaturen.
(Eine zu hohe Viskosität führt in diesem Fall zu einer Verringerung des Wirkungsgrades und zur Überhitzung).

Lubrificazione

ADDITIVI
In tutti gli oli minerali sono contenuti degli additivi antiusura, EP (più o meno energici), antiossidanti ed antischiuma. E' opportuno assicurarsi che essi siano blandi e non agressivi nei confronti delle guarnizioni.

BASE DELL'OLIO
Può essere minerale o sintetica.
L' olio sintetico, compensa il costo più elevato con una serie di vantaggi:

a) minor coefficiente d'attrito (quindi migliore rendimento)

b) migliore stabilità nel tempo (possibile lubrificazione a vita)

c) migliore indice di viscosità (migliore la adattabilità alle varie temperature).

L' olio a base minerale come vantaggi ha il minore costo e un migliore comportamento in rodaggio.

Lubrication

ADDITIVES
All mineral oils contain additives to protect against wear, EP (more or less strong), anti-oxidizing and anti-frothing. It is advisable to make sure that the action of such additives is bland and not too aggressive on the seals.

OIL BASE
May be mineral or synthetic.
Synthetic oil compensates for the higher cost with a series of advantages :

a) lower friction coefficient (consequently improved efficiency)

b) better stability over time (possible life lubrication)

c) better viscosity index (more adaptable to various temperatures).

Mineral-base oils offer the advantages of costing less and performing better during the running-in period.

Ölschmierung

ZUSAETZE
Alle Mineralöle enthalten Antiverschleiß-Zusätze, EP (mehr oder weniger stark), Oxydationsschutzmittel und Mittel gegen Schaumbildung.
Es soll sichergestellt werden, daß diese Zusätze schwach sind und die Dichtungen nicht angreifen.

ÖLGRUNDLAGE
Es kann sich dabei um Mineralöl oder synthetisches Öl handeln.
Synthetisches Öl ist kostenintensiver, bietet jedoch viele Vorteile:

a) geringerer Reibungskoeffizient (besserer Wirkungsgrad)

b) höhere Stabilität über lange Zeit (lebenslange Schmierung möglich)

c) besserer Viskositätsindex (passt sich besser an Temperaturschwankungen an).

Die Vorteile von Mineralöl sind die niedrigeren Kosten und das bessere Einfahrverhalten.

Installazione

Fissare il riduttore in modo tale da evitare qualsiasi vibrazione e curare l'allineamento del riduttore con il motore e l'utenza utilizzando, quando è possibile, giunti di accoppiamento.
Assicurarsi che gli organi da montare sui riduttori abbiano le tolleranze ISO h6 per gli alberi e ISO H7 per i fori.
Se il riduttore viene installato all'aperto si consiglia l'utilizzo del tappo di sfiato con valvola, tranne le grandezze 30-40-50-63-75-89.
Tutti i riduttori e motoriduttori citati nel presente manuale sono destinati ad un impiego industriale con temperatura ambiente da -20°C a +40°C ad una altitudine max di 1000 m slm.

Per tutte le altre avvertenze consultare il manuale di "uso e manutenzione" scaricabile dal sito www.tramec.it

Installation

The gearbox has to be mounted to prevent any vibration. Check carefully the allignment gearbox / motor / machine and use couplings whenever possible. Check that devices to be mounted on the gearbox feature ISO h6 tolerance for the shafts and ISO H7 for the holes.
If the gearbox is installed outdoors, we reccomend the use of the breather plug with valve, except size 30-40-50-63-75-89.
All reducers and gear motors mentioned in this catalog are intended for industrial use and operation at a ambient temperature between -20°C and +40°C, at an altitude of max. 1000 m above sea level.

For all other instructions check the "Use and Maintenance Manual" which can be downloaded from our web site www.tramec.it

Einbau

Das Getriebe ist so zu installieren, dass allerart Schwingung vorbeugt wird.
Auf die Fluchtung Getriebe / Motor / Maschine ist es besonders achtzugeben. Dabei sind Kupplungen womöglich zu benutzen. Die auf dem Getriebe montierten Elemente sollen die folgende Toleranz aufweisen: ISO h6 für die Wellen und ISO h7 für die Bohrungen.
Abgesehen von Größen 30-40-50-63-75-89, die Anwendung einer Entlüftungsschraube mit Ventil wird empfohlen, wenn das Getriebe im Freien eingebaut wird.
Alle im vorliegenden Katalog angegebenen Getriebe und Getriebemotoren sind für industriellen Einsatz in einer Umgebungstemperatur von -20°C bis +40°C und in einer max. Höhe von 1000 m über dem Meeresspiegel vorgesehen.
Für weitere Anweisungen laden Sie die "Betriebs- und Instandhaltungsanweisung" aus unsere Webseite www.tramec.it herunter.

Manutenzione

Tutti i riduttori a vite senza fine, eccetto X130 e K130, sono lubrificati a vita con olio sintetico tipo SHELL OMALA S4 WE 320.
Non necessitano quindi di particolari manutenzioni se non il mantenimento della pulizia esterna, evitando l'uso di solventi per non danneggiare guarnizioni o anelli di tenuta, ed il rispetto di tutte le indicazioni e della eventuale sostituzione dell'olio negli intervalli programmati e riportati nel manuale di "uso e manutenzione" scaricabile dal sito www.tramec.it

Maintenance

All worm gearboxes, except for the type X130 and K130, are lubricated for life with synthetic oil SHELL OMALA S4 WE 320.
For this reason they do not require any particular maintenance, except for external cleaning (avoid the use of solvents which might damage gaskets and oil seals) and observance of the schedules for oil change as reported in the "Use and Maintenance Manual" which can be downloaded from our web site www.tramec.it

Wartung

Alle Schneckengetriebe mit Ausnahme der Ausführung X130 und K130 sind mit synthetischem Öl SHELL OMALA S4 WE 320 lebenslang geschmiert.
Deshalb brauchen sie kein besonderes Instandhalten außer Aussenreinigung und Befolgung der Zeitabstände für Ölwechsel, wie es in der "Betriebs- und Instandhaltungsanweisung" auf unsere Webseite www.tramec.it angegeben wird. Bei der Aussenreinigung benutzen Sie keine Lösemittel, weil sie die Dichtungen beschädigen.

Verniciatura

Le carcasse in ghisa e le flange delle grandezze 90, 110 e 130 sono verniciate di colore BLU RAL 5010 mentre quelle in alluminio delle grandezze 89, 75, 63, 50, 40 e 30 sono sabbiate.

Painting

Size 90, 110 and 130 have cast iron housings and flanges painted BLUE RAL 5010.
The housings of sizes 89, 75, 63, 50, 40 and 30 are made in aluminium and sandblasted.

Lackierung

Die Gehäuse der Größen 90, 110 und 130 bestehen aus Gusseisen und sind BLAU RAL 5010 lackiert.
Für Größen 89, 75, 63, 50, 40 und 30 ist das Gehäuse aus Aluminium und sandgestrahlt.

Rodaggio

Si consiglia di incrementare gradualmente nel tempo la potenza trasmessa oppure limitare il momento torcente resistente della macchina da comandare per le prime ore di funzionamento.

Per i riduttori lubrificati con olio minerale dopo le prime 500 - 1000 ore di funzionamento sostituire l'olio effettuando, se possibile, un accurato lavaggio interno del riduttore.
Controllare periodicamente il livello del lubrificante ed effettuare il cambio dopo 4000 ore di funzionamento.
Se è utulizzato olio sintetico il cambio può essere effettuato dopo 12500 ore di funzionamento.
Quando il riduttore resta per lungo tempo inattivo in un ambiente con una elevata percentuale di umidità si consiglia di riempirlo completamente di olio.
Naturalmente al momento della successiva messa in funzione sarà necessario ripristinare il livello del lubrificante.

Running-in

Increase the transmitted power gradually or limit the resistant torque of the driven machine for the first few operating hours.

Gear units lubricated with mineral oil, change the oil after the first 500 – 1000 operating hours and if possible thoroughly flush the inside of the gearbox.
Check the lubricant level regularly and change after 4000 operating hours. If synthetic oil is used the oil change may take place after 12500 running hours.
When the gearbox is left unused in a highly humid environment fill it completely with oil.
Importantly the oil must be returned to the operating level before the unit is used again.

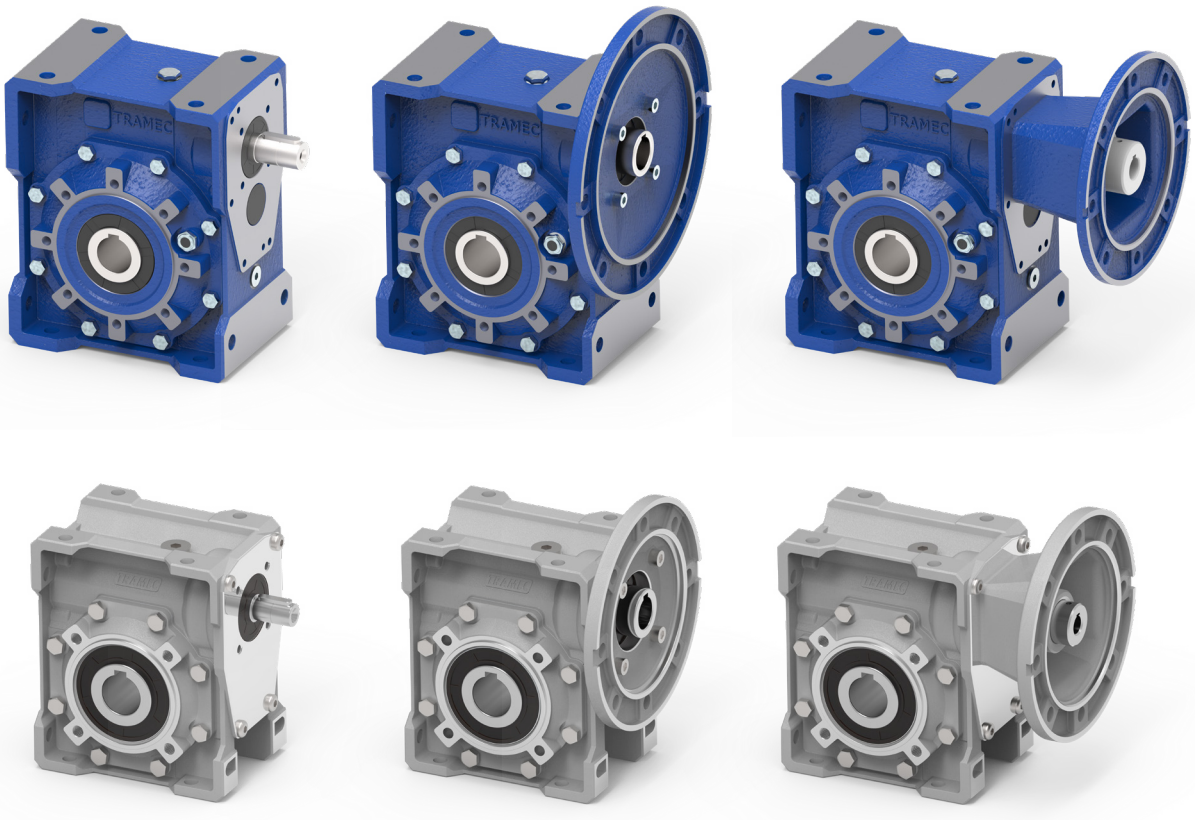
Einfahren

Es ist ratsam, die Leistung nur allmählich zu steigern oder das Widerstandsdrehmoment der Maschine in den ersten Betriebsstunden zu begrenzen.

Bei mit Mineralöl geschmierten Getrieben ist nach den ersten 500 bis 1000 Betriebsstunden ein Ölwechsel durchzuführen, dabei sollte das Getriebeinnere möglichst ausgespült werden.
Von Zeit zu Zeit ist der Ölstand zu prüfen, alle 4000 Betriebsstunden sollte ein Ölwechsel stattfinden.
Bei Verwendung von Synthetiköl kann der Ölwechsel alle 12500 Betriebsstunden erfolgen.
Wenn das Getriebe lange Zeit in einem Raum mit hoher Luftfeuchtigkeit stillliegt, ist es ratsam, es ganz mit Öl zu füllen.
Wird es danach wieder in Betrieb genommen, so ist natürlich vorher der richtige Ölstand wiederherzustellen.

RIDUTTORI A VITE SENZA FINE X — *X WORM GEARBOXES* — SCHNECKENGETRIEBE X

X



Caratteristiche	*Characteristics*	Merkmale
• I riduttori a vite senza fine della serie X sono disponibili nelle versioni alberata XA e con predisposizione per attacco motore XF-XC. La grandezza 89 è disponibile solo nella versione XC.	• *X series worm gearboxes are available in the following versions : XA with shaft, XF and XC suitable for motor mounting assembling. The size 89 is only available in the XC version.*	• Die Schneckengetriebe der Serie X sind in die Versiön XA mit Welle und XF / XC mit Motoranschluß lieferbar. Die Größe 89 ist nur in der XC-Version erhältlich.
• La versione XF (campana + giunto), caratterizzata da una più ampia versatilità ai diversi tipi di applicazioni, presenta un più elevato rendimento rispetto a quello della serie compatta XC la quale, a sua volta, presenta il vantaggio di un ingombro più ridotto.	• *The XF version (bell + joint) suits a wider range of applications and provides higher efficiency than the XC compact version, which actually offers reduced space requirement.*	• Die Version XF (Glocke + Kupplung), die sich durch ihre zahlreichen Anwendungsmöglichkeiten auszeichnet, bietet höhere Leistung als die Kompaktserie XC, die wiederum Vorteile im Sinne der Platzersparnis mit sich bringt.
• La carcassa monoblocco è in ghisa nelle grandezze 90, 110 e 130, in alluminio pressofuso per le grandezze 30, 40, 50, 63, 75 e 89.	• *The enbloc housing is in cast-iron for sizes 90, 110 and 130, in die-cast aluminium for sizes 30, 40, 50, 63, 75 and 89.*	• Das Blockgehäuse ist aus Gusseisen für die Baugrößen 90, 110 und 130, aus Aluminiumdruckguß die Baugrößen 30, 40, 50, 63, 75 und 89.
• La vite senza fine è in acciaio legato cementato-temprato ed è rettificata.	• *The worm shaft is in case-and quenchhardened alloy steel and ground.*	• Die Schnecke ist aus einsatzgehärtetem/abgeschrecktem und daraufhin geschliffenen Legierungsstahl.
• La corona ha il mozzo in ghisa con riporto di fusione dell'anello in bronzo.	• *The worm wheel has a cast-iron hub provided with inserted cast-bronze ring.*	• Das Schneckenrad besteht aus einer Nabe aus Gusseisen und einem aufgeschleuderten Gussbronze –Ring.
• Le carcasse in ghisa sono verniciate BLU RAL5010 mentre quelle in alluminio sono sabbiate.	• *The housings in cast iron are painted BLUE RAL 5010, those in aluminium are sandblasted.*	• Das Schneckenrad aus Gusseisen werden mit BLAU RAL 5010 lackiert, die aus Aluminium werden sandgestrahlt.
• Viene fornito l'albero uscita cavo di serie ed esiste un'ampia disponibilità di accessori: seconda entrata, cuscinetti conici sulla corona, flangia uscita, albero lento con 1 o 2 sporgenze, limitatore di coppia con cavo passante, braccio di reazione, kit protezione albero cavo, kit protezione limitatore di coppia.	• *The hollow output shaft is supplied as standard. A broad range of accessories is available: second input, tapered roller bearings on the worm wheel, output flange, single or double-extended output shaft, torque limiter with through hollow shaft, torque arm, hollow shaft protection kit, torque limiter protection kit.*	• Die Hohlwelle gehört zur serienmäßigen Ausstattung. Zahlreiches Zubehör ist lieferbar: zweiter Antrieb, Kegellager auf das Schneckenrad, Abtriebsflansch, Standard oder doppelseitig herausragende Abtriebswelle, Drehmomentbegrenzer mit durchgehender Hohlwelle, Drehmomentstütze, Schutzvorrichtung für Hohlwelle, Schutzvorrichtung für Drehmomentbegrenzer.

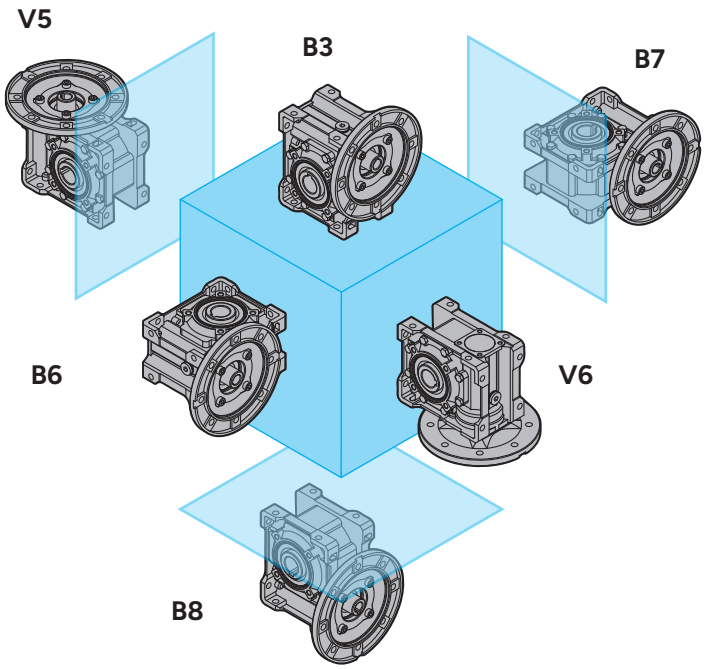
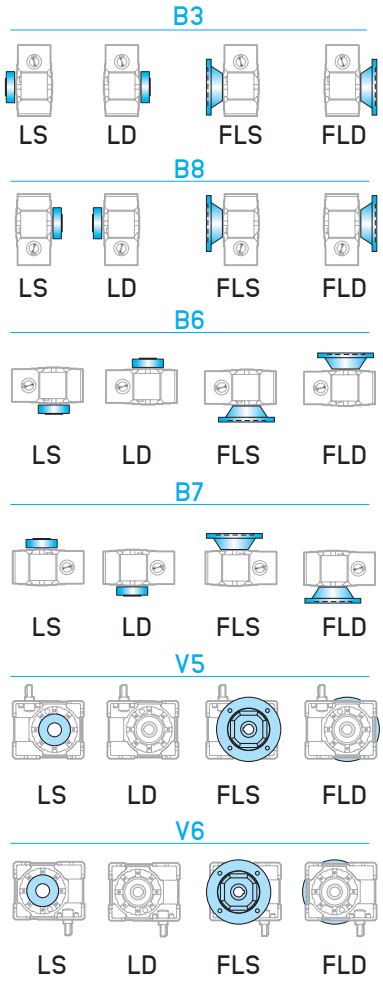
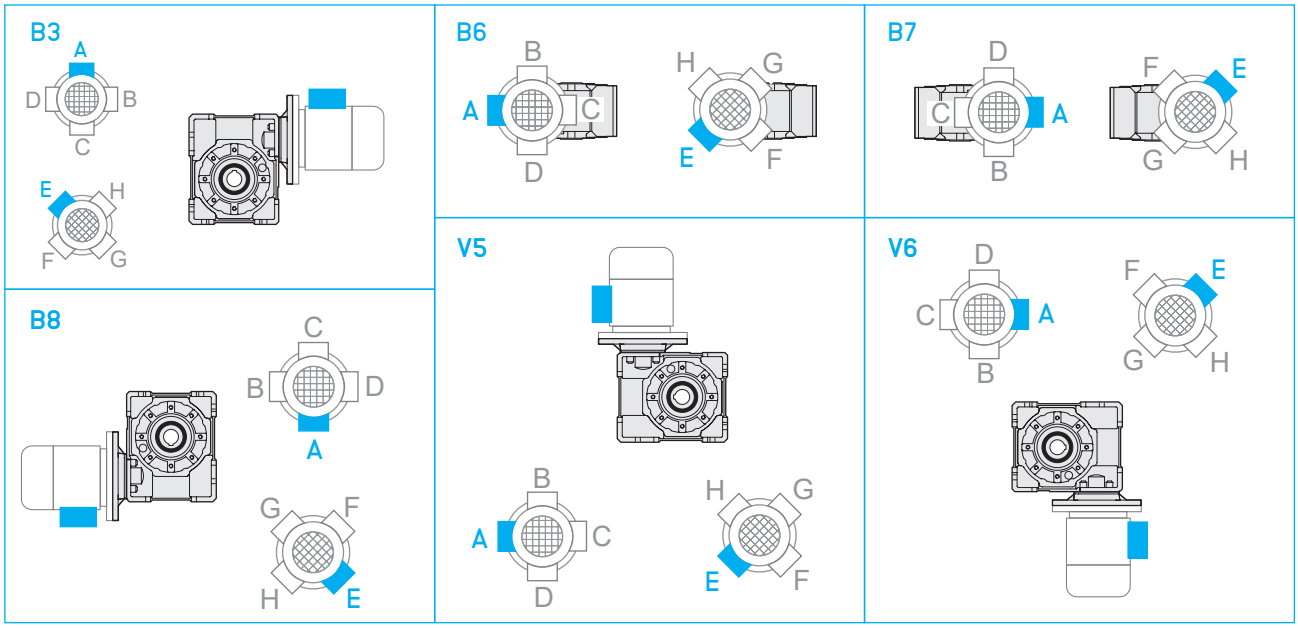
Posizioni di montaggio — *Mounting positions* — Einbaulage





Posizione morsettiera — *Terminal board position* — Lage des Klemmenkastens



Specificare sempre in fase di ordinazione la posizione di montaggio e la forma costruttiva.
Posizione morsettiera v. pag. B21-B22 (PM=1; PM=2)

Mounting position always to be specified when ordering.
Terminal board position see page B21-B22 (PM=1; PM=2)

Bei der Bestellung immer die gewünschte Montageposition und Bauform angeben.
Lage der Klemmenkaste Seite B21-B22 (PM=1; PM=2)

Lubrificazione

I riduttori a vite senza fine serie X, tranne la grandezza 130, sono forniti completi di lubrificante sintetico a base PAG con indice di viscosità ISO VG320.
Si raccomanda di precisare sempre, in fase di ordine, la posizione di lavoro desiderata.

Per ulteriori dettagli consultare pag. A19 paragrafo “Lubrificazione”.

Lubrication

X series worm gearboxes, except for the size 130, are supplied with synthetic lubricant, PAG base, viscosity index ISO VG320.
Mounting position always to be specified when ordering.

For more details, see page A19, paragraph “Lubrication”.

Schmierung

Schneckengetriebe der Serie X, außer Groesse 130, werden mit synthetischem Schmiermittel auf PAG Basis und Viskosität Index ISO VG320 geliefert.
Im Auftrag bitte immer die gewünschte Einbaulage angeben.

Weitere Einzelheiten finden Sie auf Seite A19, Absatz Schmierung.

*** ATTENZIONE:** la coppia massima utilizzabile [T_{2M}] deve essere calcolata utilizzando il fattore di servizio:
$T_{2M} = T_2 \times FS'$

**** WARNING:*** *Maximum allowable torque [T_{2M}] must be calculated using the following service factor:*
$T_{2M} = T_2 \times FS'$

***ACHTUNG:** das max. anwendbare Drehmoment [T_{2M}] muss mit folgendem Betriebsfaktor berechnet werden:
$T_{2M} = T_2 \times FS'$

Limitatore di coppia cavo passante

Torque limiter with through hollow shaft

Drehmomentbegrenzer mit durchgehender Hohlwelle

Il limitatore di coppia viene consigliato in tutte quelle applicazioni che richiedono una limitazione sulla coppia trasmissibile per proteggere l'impianto e/o preservare il riduttore evitando sovraccarichi o urti indesiderati quanto inaspettati.
È un dispositivo con albero dotato di cavo passante, con funzionamento a frizione, ed è integrato al riduttore, presentando un ingombro limitato.
Concepito per lavorare a bagno d'olio, il dispositivo risulta affidabile nel tempo ed è esente da usura se non viene mantenuto in condizioni prolungate di slittamento (condizione che si verifica quando la coppia presenta valori superiori a quelli di taratura).
La taratura è facilmente regolabile dall'esterno attraverso il serraggio di una ghiera autobloccante che porta a compressione le 4 molle a tazza disposte tra loro in serie.

Il dispositivo non consente:
- l'impiego di cuscinetti a rulli conici in uscita
- funzionamento prolungato in condizioni di slittamento.

The use of a torque limiter is advised when the application requires the limitation of the transmissible torque to safeguard the plant and/or to prevent from unexpected and undesired overloads or shocks which might damage the gearbox.
The torque limiter is a device equipped with through hollow shaft and a friction clutch. It is integrated with the gearbox, therefore the space requirement is limited.
Designed to work in oil bath, the device is reliable over time and is not subject to wear unless kept under conditions of prolonged slipping (it occurs when the torque values are higher than the calibration values).
Calibration can be easily adjusted from outside by tightening the self-locking ring nut which causes the compression of the 4 Belleville washers arranged in series.
The device does not go together with:
- *the use of tapered roller bearings at output*
- *Prolonged operation under slipping conditions.*

Die Anwendung eines Drehmomentbegrenzers wird empfohlen, um die Anlage und/oder das Getriebe gegen ungewünschte und unerwartete Überbelastungen oder Stoßen zu schützen.
Der Begrenzer verfügt über eine Welle mit durchgehende Hohlwelle und eine Kupplung. Er ist in dem Getriebe integriert, d.h. der Raumbedarf ist klein.
Der Drehmomentbegrenzer wurde für Betrieb in einem Ölbad entworfen. Er ist zuverlässig über Zeit und verschleissfest (außer wenn Rutschen für lange Zeit besteht: das passiert, wenn das Drehmoment hoher als der Eichwert ist).
Die Einstellung darf mühelos von außen durch das Anziehen einer selbstsperrenden Mutter ausgeführt werden.
Das Anziehen verursacht die Zusammedrückung der 4 wechelsinniggeschichteten Tellerfeder.
Der Begrenzer sieht das folgende nicht vor:
- die Verwendung von Kegelrollenlager am Abtrieb
- Längerer Rutschbetrieb.

Nella tabella seguente vengono riportati i valori delle coppie di slittamento M_{2S} in funzione del n° di giri della ghiera.
I valori di taratura presentano una tolleranza del ±10% e si riferiscono ad una condizione statica.
In condizioni dinamiche è da notare che la coppia di slittamento assume valori diversi a seconda del tipo e/o modalità in cui si verifica il sovraccarico: con valori maggiori in caso di carico uniformemente crescente rispetto a volori più contenuti in seguito al verificarsi di picchi improvvisi di carico.
NOTA: quando si supera il valore di taratura si ha slittamento.
Il coefficiente di attrito tra le superfici di contatto da statico diventa dinamico e la coppia trasmessa cala del 30% circa.
E' quindi opportuno prevedere uno stop per poter ripartire al valore di taratura iniziale.

The following table shows the values of M_{2S} slipping torques depending on the number of revolutions of the ring nut. Calibration values feature a ±10% tolerance and refer to static conditions. Under dynamic conditions, the values of the slipping torque differ depending to the type of overload: the values are higher if the load increase is uniform, the values are lower if sudden load peaks occur.

***NOTE:** Slipping occurs when the setting values are exceeded.*
The friction coefficient between the contact surfaces from static becomes dynamic and the transmitted torque is approx. 30% lower.
It is advisable to have a stop first in order to have a restart based on the initial setting value.

Die nachstehende Tabelle zeigt die Werte der Rutschmomente M_{2S} abhängig von der Zahl der Umdrehungen der Mutter.
Die Eichwerte weisen ±10% Toleranz auf und beziehen sich auf statische Bedingungen.
Unter dynamischen Bedingungen hat das Rutschmoment verschiedene Werte je nach Art der Überbelastung.
Die Werte sind hoher, wenn die Belastung gleichmäßig zunimmt; sie sind niedriger im Falle von plötzlichen Belastungsspitzen.

BEMERKUNG: Rutschen tritt auf, wenn die eingestellten Werte überschritten werden. Der Reibungsfaktor zwischen den Berührungsflächen wird dynamisch anstatt statisch und das übertragene Drehmoment sinkt um ca. 30%.
Es ist daher ratsam, vor dem erneuten Anfahren anzuhalten, um die ursprünglichen Drehmomentwerte zu erreichen.

Limitatore di coppia cavo passante

E' importante notare che la coppia di slittamento non resta sempre la medesima durante tutta la vita del limitatore.
Tende infatti a diminuire in rapporto al numero e alla durata degli slittamenti che, rodando le superfici di contatto, ne aumentano il rendimento.
È quindi opportuno verificare periodicamente, soprattutto durante la fase di rodaggio, la taratura del dispositivo.
Là dove sia richiesto un errore più contenuto nella taratura, è necessario testare la coppia trasmissibile sull' impianto.
Il dispositivo viene consegnato tarato alla coppia riportata a catalogo T_{2M} salvo diversa indicazione espressa in fase di ordinazione.

Torque limiter with through hollow shaft

It is important to note that the slipping torque is not the same for the entire life of the torque limiter. It usually decreases in connection with the number and the duration of slippings, this is due to the surface of the torque limiter becoming more engaged, therefore increasing the efficiency.
For this reason it is advisable to check the calibration of the device at regular intervals, specially during the running-in period. Should a smaller calibration error be required, it is necessary to test the transmissible torque on the plant.
The torque limiter is supplied already calibrated at the torque value T_{2M}, unless otherwise specified in the order.

Drehmomentbegrenzer mit durchgehender Hohlwelle

Es ist wichtig zu beachten, dass das Rutschmoment der Rutschkupplung über die gesamte Lebensdauer nicht konstant bleibt, sondern üblicherweise in Verbindung mit längeren Rutschzyklen aufgrund der eingelaufenen Berührungsflächen abnimmt.
Deswegen ist es ratsam, die Einstellung der Vorrichtung besonders während der Einlaufzeit in regelmäßigen Zeitabständen zu prüfen.
Wenn der Drehmomentbegrenzer geliefert wird, ist dieser schon auf dem im Katalog unter T_{2M} angegebenen Wert eingestellt, außer wenn es in der Bestellung anders angegeben wird.

RIDUTTORI A VITE SENZA FINE K — *K WORM GEARBOXES* — SCHNECKENGETRIEBE K

K

Caratteristiche	*Characteristics*	Merkmale
• I riduttori della serie a vite senza fine KC si presentano estremamente leggeri grazie alla forma compatta della carcassa in ghisa nelle grandezze 90,110 e 130, in alluminio pressofuso per le grandezze 30, 40, 50, 63, 75 e 89.	• *The KC worm gearboxes are extremely light thanks to the compact shape of the housing, which is in cast iron for sizes 90, 110 and 130, in die-cast aluminium for sizes 30, 40, 50, 63, 75 and 89.*	• Die Schneckengetriebe der Serie KC sind äußerst leicht dank der kompakten Form des Gehäuses. Das Gehäuse ist aus Gusseisen für Größen 90, 110 und 130, aus Druckgussaluminium für Größen 30, 40, 50, 63, 75 und 89.
• La serie presenta una svariata possibilità di versioni, con e senza piedi, che la rendono più versatile nell'impiego in ogni tipologia di applicazione.	• *This series features a wide range of versions, with and without feet, which makes it extremely versatile for utilization in various applications.*	• Diese Serie ist in vielen Ausführungen, mit und ohne Füße erhältlich, was eine vielseitige Anwendbarkeit in unterschiedlichsten Applikationen ermöglicht.
• La serie K è disponibile esclusivamente nella versione predisposta per attacco motore (PAM) e non con albero entrata maschio.	• *The K series is available for motor mounting version (PAM) only and not with the male input shaft.*	• Die Serie K ist nur mit Motoranbau Version (IEC) und nicht mit einer Antriebswelle verfügbar.
• La vite senza fine è in acciaio legato cementato-temprato ed è rettificata.	• *The worm shaft is in case-and quenchhardened alloy steel and ground.*	• Die Schneckenwelle ist aus einsatzgehärtetem / abgeschrecktem und daraufhin geschliffenem Legierungsstahl.
• La corona ha il mozzo in ghisa con riporto di fusione dell'anello in bronzo.	• *The worm wheel has a cast-iron hub with inserted cast bronze ring.*	• Das Schneckenrad besteht aus einer Nabe aus Gusseisen und einem aufgeschleuderten Gussbronze-Ring.
• Le carcasse in ghisa sono verniciate BLU RAL5010 mentre quelle in alluminio sono sabbiate.	• *The cast-iron housings are painted BLUE RAL5010 whereas the aluminium housings are sandblasted.*	• Gehäuse aus Gusseisen werden mit BLAU RAL5010 lackiert, die Gehäuse aus Aluminium werden sandgestrahlt.
• Viene fornito l'albero uscita cavo di serie ed esiste un'ampia disponibilità di accessori: seconda entrata, cuscinetti conici sulla corona, flangia uscita, albero lento con 1 o 2 sporgenze, limitatore di coppia con cavo passante, braccio di reazione, kit protezione albero cavo, kit protezione limitatore di coppia.	• *The hollow output shaft is supplied as standard. A broad range of accessories is available: second input, tapered roller bearings on the worm wheel, output flange, single or double-extended output shaft, torque limiter with through hollow shaft, torque arm, hollow shaft protection kit, torque limiter protection kit.*	• Die Hohlwelle gehört zur serienmäßigen Ausstattung. Eine breite Auswahl an Zubehör ist erhältlich: zweiter Antrieb, Kegellager auf das Schneckenrad, Abtriebsflansch, Standard oder doppelseitig herausragende Abtriebswelle, Drehmomentbegrenzer mit durchgehender Hohlwelle, Drehmomentstütze, Schutzvorrichtung für Hohlwelle, Schutzvorrichtung für Drehmomentbegrenzer.

Terminal board position see page C20 (PM=1; PM=2)

Bei der Bestellung immer die gewünschte Montageposition und Bauform angeben.
Lage der Klemmenkaste Seite C20 (PM=1; PM=2)

Lubrificazione

I riduttori a vite senza fine serie K, tranne la grandezza 130, sono forniti completi di lubrificante sintetico a base PAG con indice di viscosità ISO VG320.
Si raccomanda di precisare sempre, in fase di ordine, la posizione di montaggio desiderata.

Per ulteriori dettagli consultare pag. A19 paragrafo “Lubrificazione”.

Lubrication

KC worm gearboxes, except for the size 130, are supplied with PAG synthetic lubricant featuring an ISO VG320 viscosity class.
Mounting position always to be specified when ordering.

For more details, see page A19, paragraph “Lubrication”.

Schmierung

Schneckengetriebe der Serie KC, außer Groesse 130, werden mit synthetischem Schmiermittel auf PAG Basis und Viskosität Index ISO VG320 geliefert.
Im Auftrag bitte immer die gewünschte Einbaulage angeben.

Weitere Einzelheiten finden Sie auf Seite A19, Absatz Schmierung.

*** ATTENZIONE:** la coppia massima utilizzabile [T_{2M}] deve essere calcolata utilizzando il fattore di servizio:
$T_{2M} = T_2 \times FS'$

**** WARNING:*** *Maximum allowable torque [T_{2M}] must be calculated using the following service factor:*
$T_{2M} = T_2 \times FS'$

***ACHTUNG:** das max. anwendbare Drehmoment [T_{2M}] muss mit folgendem Betriebsfaktor berechnet werden:
$T_{2M} = T_2 \times FS'$

Limitatore di coppia cavo passante

Torque limiter with through hollow shaft

Drehmomentbegrenzer mit durchgehender Hohlwelle

Il limitatore di coppia viene consigliato in tutte quelle applicazioni che richiedono una limitazione sulla coppia trasmissibile per proteggere l'impianto e/o preservare il riduttore evitando sovraccarichi o urti indesiderati quanto inaspettati.
È un dispositivo con albero dotato di cavo passante, con funzionamento a frizione, ed è integrato al riduttore, presentando un ingombro limitato.
Concepito per lavorare a bagno d'olio, il dispositivo risulta affidabile nel tempo ed è esente da usura se non viene mantenuto in condizioni prolungate di slittamento (condizione che si verifica quando la coppia presenta valori superiori a quelli di taratura).
La taratura è facilmente regolabile dall'esterno attraverso il serraggio di una ghiera autobloccante che porta a compressione le 4 molle a tazza disposte tra loro in serie.

The use of a torque limiter is advisable when the application requires the limitation of the transmissible torque to safeguard the plant and/or the gearbox from unexpected or undesired overloads.
The torque limiter is equipped with a through hollow shaft and a friction clutch. It is integrated in the gearbox, therefore space requirement is limited.
Designed to be working in oil bath, the device is reliable over time and is not subject to wear unless in case of operation with prolonged slipping (it occurs when the torque values are higher than the calibration values).
Calibration can be easily adjusted from outside by tightening the self-locking ring nut, which causes the compression of the 4 Belleville washers arranged in series.

Die Anwendung eines Drehmoment-begrenzers wird empfohlen, um die Anlage und/oder das Getriebe gegen ungewünschte und unerwartete Überbe-lastungen zu schützen.
Es handelt sich um eine Vorrichtung mit einer durchgehender Hohlwelle.
Er ist in dem Getriebe integriert, d.h. der Raumbedarf ist klein. Der Begrenzer wurde für Betrieb in einem Ölbad entworfen.
Er ist zuverläßig über Zeit und verschleissfest (aussen wenn Rutschen für lange Zeit besteht: das passiert, wenn das Drehmoment höher als der Eichwert ist).
Die Einstellung darf mühelos von aussen durch das Anziehen einer selbstsperrenden Mutter ausgeführt werden. Das Anziehen verursacht die Zusammendrückung der 4 wechselsinniggeschichteten Tellerfeder.

Il dispositivo non consente:
- l'impiego di cuscinetti a rulli conici in uscita
- funzionamento prolungato in condizioni di slittamento.

The device does not go together with:
- *the use of tapered roller bearings at output*
- *prolonged operation under slipping conditions*

Die Vorrichtung sieht das folgende nicht vor:
- die Verwendung von Kegelrollenlager am Abtrieb
- Längerer Rutschbetrieb

Nella tabella seguente vengono riportati i valori delle coppie di slittamento M_{2S} in funzione del n° di giri della ghiera.
I valori di taratura presentano una tolleranza del ±10% e si riferiscono ad una condizione statica.
In condizioni dinamiche è da notare che la coppia di slittamento assume valori diversi a seconda del tipo e/o modalità in cui si verifica il sovraccarico: con valori maggiori in caso di carico uniformemente crescente rispetto a volori più contenuti in seguito al verificarsi di picchi improvvisi di carico.
NOTA: quando si supera il valore di taratura si ha slittamento. Il coefficiente di attrito tra le superfici di contatto da statico diventa dinamico e la coppia trasmessa cala del 30% circa.
E' quindi opportuno prevedere uno stop per poter ripartire al valore di taratura iniziale.

The following table shows the values of M_{2S} slipping torques depending on the number of revolutions of the ring nut.
Calibration values feature a ±10% tolerance and refer to static conditions.
Under dynamic conditions the values of the slipping torque will change according to the type of overload: the values are higher if the load increase is uniform; the values are lower if sudden load peaks occur.

***NOTE:** Slipping occurs when the setting values are exceeded.*
The friction coefficient between the contact surfaces from static becomes dynamic and the transmitted torque is approx. 30% lower.
It is advisable to have a stop first in order to have a restart based on the initial setting value.

Die nachstehende Tabelle zeigt die Werte der Rutschmomente M_{2S} abhängig von der Zahl der Umdrehungen der Mutter.
Die Eichwerte weisen ±10% Toleranz auf und beziehen sich auf statische Bedingungen.
Unter dynamischen Bedingungen hat das Rutschmoment verschiedene Werte je nach Art der Überbelastung.
Die Werte sind hoher, wenn die Belastung gleichmäßig zunimmt; sie sind niedriger im Falle von plötzlichen Belastungsspitzen.
BEMERKUNG: Rutschen tritt auf, wenn die eingestellten Werte überschritten werden. Der Reibungsfaktor zwischen den Berührungsflächen wird dynamisch anstatt statisch und das übertragene Drehmoment sinkt um ca. 30%.
Es ist daher ratsam, vor dem erneuten Anfahren anzuhalten, um die ursprünglichen Drehmomentwerte zu erreichen.

Limitatore di coppia cavo passante

È importante notare che la coppia di slittamento non resta sempre la medesima durante tutta la vita del limitatore.
Tende infatti a diminuire in rapporto al numero e alla durata degli slittamenti che, rodando le superfici di contatto, ne aumentano il rendimento.
È quindi opportuno verificare periodicamente, soprattutto durante la fase di rodaggio, la taratura del dispositivo.
Là dove sia richiesto un errore più contenuto nella taratura, è necessario testare la coppia trasmissibile sull'impianto.
Il dispositivo viene consegnato tarato alla coppia riportata a catalogo T_{2M} salvo diversa indicazione espressa in fase di ordinazione.

Torque limiter with through hollow shaft

It is important to note that the slipping torque is not the same for the entire life of the torque limiter.
It usually decreases in connection with the number and the duration of slippings, this is due to the surfaces of the torque limiter becoming more engaged, therefore increasing the efficiency.
For this reason it is advisable to check the calibration of the device at regular intervals, specially during the running-in period.
Should a smaller calibration error be required, it is necessary to test the transmissible torque on the plant.
The torque limiter is supplied already calibrated at the torque value reported in the catalogue T_{2M}, unless otherwise specified in the order.

Drehmomentbegrenzer mit durchgehender Hohlwelle

Es ist wichtig zu beachten, dass das Rutschmoment der Rutschkupplung über die gesamte Lebensdauer nicht konstant bleibt, sondern üblicherweise in Verbindung mit längeren Rutschzyklen aufgrund der eingelaufenen Berührungsflächen abnimmt.
Deswegen ist es ratsam, die Einstellung der Vorrichtung besonders während der Einlaufzeit in regelmäßigen Zeitabständen zu prüfen.
Falls ein niedriger Eichfehler verlangt wird, ist das übersetzbare Drehmoment auf der Anlage zu testen.
Wenn die Vorrichtung geliefert wird, ist sie schon auf dem im Katalog T_{2M} angegebenen Drehmoment geeicht, ausser wenn es in der Bestellung anders angegeben wird.

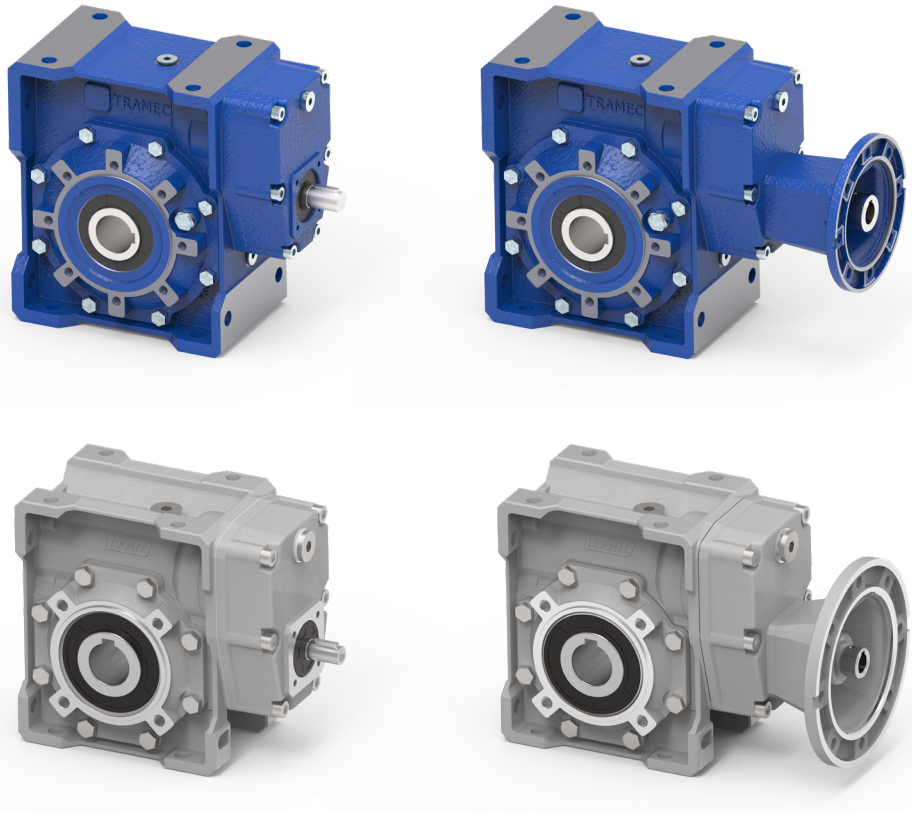
RIDUTTORI A VITE SENZA FINE CON PRECOPPIA H

H HELICAL WORM GEARBOXES

STIRNRAD-SCHNECKENGETRIEBE H

H



Caratteristiche	*Characteristics*	Merkmale
• La serie H presenta le stesse caratteristiche della serie X, ma la presenza della precoppia cilindrica in entrata consente la realizzazione di rapporti più elevati o, a parità di rapporto, rendimenti migliori.	• *The H series has the same characteristics as the X series with the addition of a spur gear pre-stage at input which provides higher ratios or better efficiency under the same ratios.*	• Die Serie H bietet die gleichen Eigenschaften wie die Serie X. Aufgrund der Stirnrad-Vorstufe bei der Serie H sind jedoch höhere Untersetzungen möglich oder man erhält bei gleichen Untersetzungen einen besseren Wirkungsgrad.
• La struttura è composta dalla carcassa monoblocco del riduttore a vite serie XA sull'entrata del quale è fissato il corpo contenente il primo stadio di riduzione.	• *The structure is composed of a single piece housing for the XA gearbox , at the input side of this gearbox is fitted the housing containing the first stage reduction.*	• Diese Ausführung besteht aus dem Blockgehäuse des Schneckengetriebes der Serie XA und einem an den antriebsseitig angebauten Gehäuse, welches die Stirnradvorstufe enthält.
• La vite senza fine è in acciaio legato cementato-temprato ed è rettificata.	• *The worm shaft is in case and quench-hardened alloy steel and ground.*	• Die Schnecke ist aus einsatzgehärtetem/abgeschrecktem und daraufhin geschliffenen Legierungsstahl.
• Gli ingranaggi della prima riduzione hanno dentatura elicoidale con profilo rettificato.	• *The gears of the first reduction have a helical toothing with ground profile.*	• Die Zahnräder der Vorstufe besitzen ein schrägverzahntes Stirnradprofil.
• La corona ha il mozzo in ghisa con riporto di fusione dell'anello in bronzo.	• *The worm wheel has a cast-iron hub provided with inserted cast-bronze ring.*	• Das Schneckenrad besteht aus einer Nabe aus Gusseisen und einem aufgeschleuderten Gussbronze-Ring.
• Viene fornito l'albero uscita cavo di serie ed esiste un'ampia disponibilità di accessori: seconda entrata, cuscinetti conici sulla corona, flangia uscita, albero lento con 1 o 2 sporgenze, limitatore di coppia con cavo passante, braccio di reazione.	• *Hollow output shaft is supplied as standard. A broad range of accessories is available: second input, tapered roller bearings on the worm wheel, output flange, single or double extended output shaft, torque limiter with through hollow shaft.*	• Zahlreiches Zubehör ist lieferbar: zweite Antrieb, Kegelrollenlager auf Schneckenrad, Abtriebsflansch, Standard oder doppelseitig herausragende Abtriebswelle, Drehmomentbegrenzer mit durchgehender Welle, Drehmomentstütze.
• Le carcasse in ghisa sono verniciate BLU RAL5010 mentre quelle in alluminio sono sabbiate.	• *Housings in cast-iron are painted BLUE RAL5010, whereas those in aluminium are sandblasted.*	• Gehäuse aus Gusseisen werden mit BLAU RAL5010 lackiert, Gehäuse aus Aluminium werden sandgestrahlt.

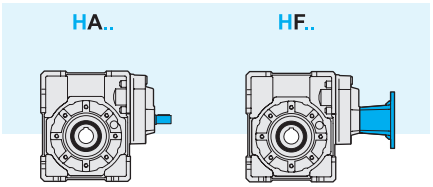
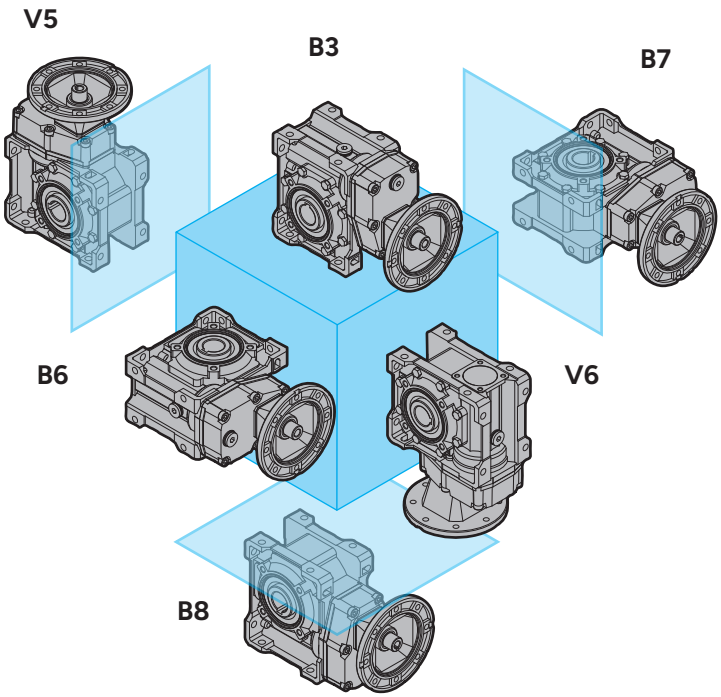
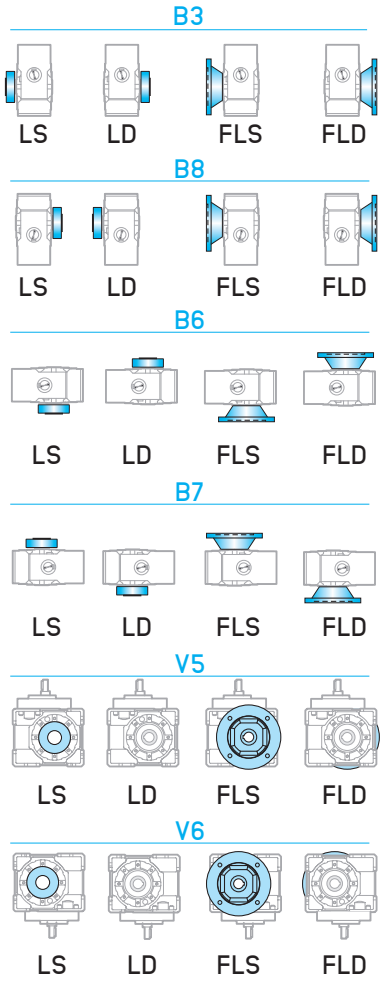
Tipo entrata — *Input type* — Antriebstyp

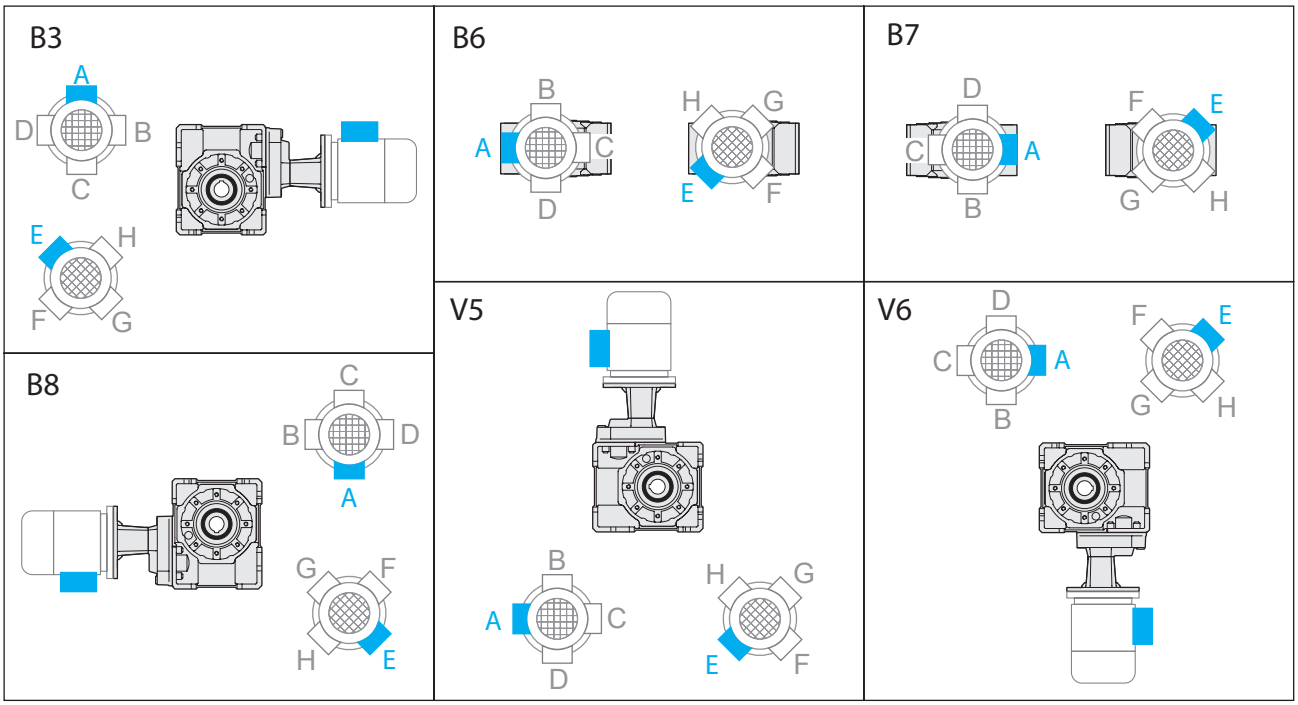


Posizioni di montaggio — *Mounting positions* — Montageposition





Posizione morsettiera — *Terminal board position* — Lage des Klemmenkastens



Specificare sempre in fase di ordinazione la posizione di montaggio e la forma costruttiva.
Posizione morsettiera v. pag. D19 (PM=1; PM=2)

Mounting position always to be specified when ordering.
Terminal board position see page D19 (PM=1; PM=2)

Bei der Bestellung immer die gewünschte Montageposition und Bauform angeben.
Lage der Klemmenkaste Seite D19 (PM=1; PM=2)

Lubrificazione

I riduttori a vite senza fine H sono forniti completi di lubrificante sintetico a base PAG con indice di viscosità ISO VG320. Si raccomanda di precisare sempre in fase di ordine, la posizione di lavoro desiderata.

Per ulteriori dettagli consultare pag. A19 paragrafo "Lubrificazione".

Lubrication

H worm gearboxes are supplied with PAG synthetic lubricant featuring an ISO VG320 viscosity class. Always specify the required mounting position when ordering.

For more details, see page A19, paragraph "Lubrication".

Schmierung

Schneckengetriebe der Serie H werden mit synthetischem Schmiermittel auf PAG Basis und Viskosität Index ISO VG320 geliefert. Im Auftrag bitte immer die gewünschte Einbaulage angeben.

Weitere Einzelheiten finden Sie auf Seite A19, Absatz Schmierung.

Posizione dei tappi e quantità di lubrificante (litri)

Positions of the plugs and lubricant quantity (liters)

Position der Kappen und Ölmenge (liter)

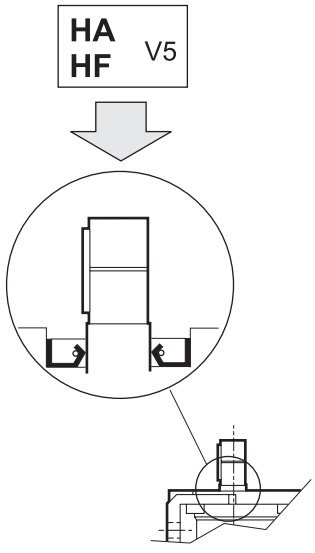
▽ Carico e sfiato / *Filling and breather* Einfüll und Entlüftung
◒ Livello / *Level* / Ölstand
▼ Scarico / *Drain* / Ablass

Nei corpi in alluminio 40, 50, 63,75 è presente un solo tappo di riempimento olio.

Aluminium housings size 40, 50, 63 and 75 have one filling plug only.

Aluminiumgehäuse in den Größen 40, 50, 63 und 75 verfügen über Einfüllungsschraube.



Attenzione! Nelle versioni HA e HF è indispensabile conoscere la posizione di lavoro in quanto nella configurazione V5 occorre posizionare in modo corretto il paraolio della vite per preservare la corretta lubrificazione della coppia d'ingranaggi cilindrici del primo stadio di riduzione.

Warning! *It is fundamental to specify the mounting position specially when ordering HA and HF versions. This is because in the V5 configuration the oil seal on the worm shaft must be positioned properly to ensure the lubrication of the spur gearset of the first reduction stage.*

Achtung! Bei den HA und HF Versionen ist die Information bez. die Einbaulage unbedingt erforderlich: in der V5 Bauform muss der Ölabdichtung auf der Schnecke korrekt eingebaut werden, um die Schmierung des Stirnradsatz der ersten Stufe aufrechtzuhalten.

*** ATTENZIONE:** la coppia massima utilizzabile [T_{2M}] deve essere calcolata utilizzando il fattore di servizio:
$T_{2M} = T_2 \times FS'$

**** WARNING:** Maximum allowable torque [T_{2M}] must be calculated using the following service factor :*
$T_{2M} = T_2 \times FS'$

*** ACHTUNG:** das max. anwendbare Drehmoment [T_{2M}] muss mit folgendem Betriebsfaktor berechnet werden:
$T_{2M} = T_2 \times FS'$

110	28	50	M8x20	132.5	8	31
130	38	70	M10x25	152	10	41

NOTA: L'entrata supplementare nella serie H si trova nella posizione intermedia del cinematismo. Quindi, se utilizzata come comando, avrà la sola riduzione della coppia vite/corona. Se invece viene utilizzata come asse condotto, la sua velocità sarà quella in entrata ridotta dal rapporto 4:1 della precoppia.

NOTE: *the second shaft of the H series gearboxes is placed in the intermediate position of the kinematic motion which if used as a drive will have only the reduction of the worm/wheel set. For the utilization as a driven shaft its speed will correspond to the input speed reduced by the ratio 4:1 of the pre-stage.*

BEMERKUNG: das zweite Wellenende der Getriebe der Serie H befindet sich in der Mitte des Getriebes. Falls das zweite Wellenende als zusätzliche Antriebswelle genutzt werden, muss aufgrund der Vorstufe mit einer um 4:1 reduzierte Drehzahl eingetrieben werden.

Limitatore di coppia cavo passante

Il limitatore di coppia viene consigliato in tutte quelle applicazioni che richiedono una limitazione sulla coppia trasmissibile per proteggere l'impianto e/o preservare il riduttore evitando sovraccarichi o urti indesiderati quanto inaspettati.
È un dispositivo con albero dotato di cavo passante, con funzionamento a frizione, ed è integrato al riduttore, presentando un ingombro limitato.
Concepito per lavorare a bagno d'olio, il dispositivo risulta affidabile nel tempo ed è esente da usura se non viene mantenuto in condizioni prolungate di slittamento (condizione che si verifica quando la coppia presenta valori superiori a quelli di taratura).
La taratura è facilmente regolabile dall'esterno attraverso il serraggio di una ghiera autobloccante che porta a compressione le 4 molle a tazza disposte tra loro in serie.
Il dispositivo non consente:
- l'impiego di cuscinetti a rulli conici in uscita
- funzionamento prolungato in condizioni di slittamento.

Nella tabella seguente vengono riportati i valori delle coppie di slittamento M_{2S} in funzione del n° di giri della ghiera.
I valori di taratura presentano una tolleranza del ±10% e si riferiscono ad una condizione statica.
In condizioni dinamiche è da notare che la coppia di slittamento assume valori diversi a seconda del tipo e/o modalità in cui si verifica il sovraccarico: con valori maggiori in caso di carico uniformemente crescente rispetto a volori più contenuti in seguito al verificarsi di picchi improvvisi di carico.
NOTA: quando si supera il valore di taratura si ha slittamento. Il coefficiente di attrito tra le superfici di contatto da statico diventa dinamico e la coppia trasmessa cala del 30% circa.
È quindi opportuno prevedere uno stop per poter ripartire al valore di taratura iniziale.

Torque limiter with through hollow shaft

The use of a torque limiter is advisable in case of applications requiring the limitation of the torque in order to safeguard the plant and/or the gearbox against unexpected and undesired overloads or shocks.
The torque limiter is equipped with a through hollow shaft and friction clutch. It is integrated in the gearbox, space requirement is therefore limited.
Designed to work in oil bath, it is reliable over time and is not subject to wear unless prolonged slipping occurs (it happens when the torque values are higher than the calibration values).
Calibration can be easily adjusted from the outside by tightening the self-locking ring nut, which causes the compression of 4 Belleville washers arranged in series.

The use of the torque limiter does not go together with:
- *the use of tapered roller bearings at output*
- *Prolonged operation under slipping conditions.*

The following table shows the values of M_{2S} slipping torques depending on the number of revolutions of the ring nut.
Calibration values feature a ±10% tolerance and refer to static conditions.
Under dynamic conditions, the values of the slipping torque differ depending to the type of overload: the values are higher if the load increase is uniform, the values are lower if sudden load peaks occur.

NOTE: *Slipping occurs when the setting values are exceeded.*
The friction coefficient between the contact surfaces from static becomes dynamic and the transmitted torque is approx. 30% lower.
It is advisable to have a stop first in order to have a restart based on the initial setting value.

Drehmomentbegrenzer mit durchgehender Hohlwelle

Die Anwendung eines Drehmomentbegrenzers wird empfohlen, um die Anlage und das Getriebe gegen unerwünschte und unerwartete Überbelastungen und Stoßen zu schützen. Der Begrenzer verfügt über eine durchgehende Hohlwelle und eine Kupplung. Er ist in dem Getriebe integriert, d.h. der Raumbedarf ist klein.
Der Drehmomentbegrenzer wurde für Betrieb in Ölbad entworfen. Er ist zuverläßig über Zeit und verschleißfest (ausser wenn Rutschen für lange Zeit besteht: das passiert, wenn das Drehmoment höher als der Eichwert ist).
Die Eichung darf mühelos von aussen durch das Anziehen einer selbstsperrenden Mutter ausgeführt werden. Das Anziehen verursacht die Zusammendrückung der 4 wechselsinnigge schichteten Tellerfeder.
Der Drehmomentbeyrenzer sieht das folgende nicht vor:
- die Verwendung von Kegelrollenlager am Abtrieb
- Längerer Rutschbetrieb.

Die nachstehende Tabelle zeigt die Werte der Rutschmomente M_{2S} abhängig von der Zahl der Umdrehungen der Mutter.
Die Eichwerte weisen ±10% Toleranz auf und beziehen sich auf statische Bedingungen.
Unter dynamischen Bedingungen hat das Rutschmoment verschiedene Werte je nach Art der Überbelastung.
Die Werte sind hoher, wenn die Belastung gleichmäßig zunimmt; sie sind niedriger im Falle von plötzlichen Belastungsspitzen.
BEMERKUNG: Rutschen tritt auf, wenn die eingestellten Werte überschritten werden. Der Reibungsfaktor zwischen den Berührungsflächen wird dynamisch anstatt statisch und das übertragene Drehmoment sinkt um ca. 30%.
Es ist daher ratsam, vor dem erneuten Anfahren anzuhalten, um die ursprünglichen Drehmomentwerte zu erreichen.

Limitatore di coppia cavo passante

È importante notare che la coppia di slittamento non resta sempre la medesima durante tutta la vita del limitatore.
Tende infatti a diminuire in rapporto al numero e alla durata degli slittamenti che, rodando le superfici di contatto, ne aumentano il rendimento.
È quindi opportuno verificare periodicamente, soprattutto durante la fase di rodaggio, la taratura del dispositivo.
Là dove sia richiesto un errore più contenuto nella taratura, è necessario testare la coppia trasmissibile sull'impianto.
Il dispositivo viene consegnato tarato alla coppia riportata a catalogo T_{2M} salvo diversa indicazione espressa in fase di ordinazione.

Torque limiter with through hollow shaft

It is important to note that the slipping torque is not the same for the entire life of the torque limiter. It usually decreases in connection with the number and the duration of slippings, this is due to the surfaces of the torque limiter becoming more engaged, therefore inreasing the efficiency.
For this reason it is advisable to check the calibration of the device at regular intervals, specially during the running-in period.
Should a smaller calibration error be required, it is necessary to test the transmissible torque on the plant.
The torque limiter is supplied already calibrated at the torque value reported in the catalogue T_{2M}, unless otherwise specified on the order.

Drehmomentbegrenzer mit durchgehender Hohlwelle

Es ist wichtig zu beachten, dass das Rutschmoment der Rutschkupplung über die gesamte Lebensdauer nicht konstant bleibt, sondern üblicherweise in Verbindung mit längeren Rutschzyklen aufgrund der eingelaufenen Berührungsflächen abnimmt.
Deswegen ist es ratsam, die Einstellung der Vorrichtung besonders während der Einlaufszeit in regelmäßigen Zeitabständen zu prüfen.
Wenn der Drehmomentbegrenzer geliefert wird, ist dieser schon auf dem im Katalog under T_{2M} angegebenen Wert eingestellt, außer wenn es in der Bestellung anders angegeben wird.

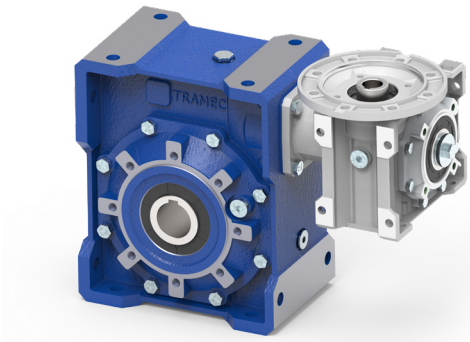
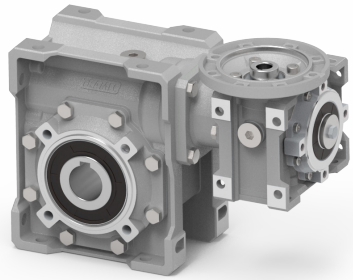
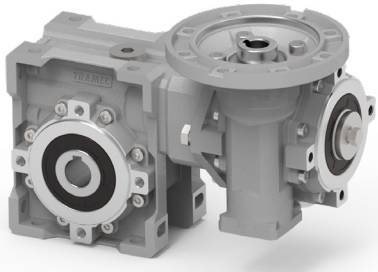
RIDUTTORI A VITE SENZA FINE COMBINATI — *COMBINED WORM GEARBOXES* — KOMBINIERTE-SCHNECKENGETRIEBE

XX
KX
KK

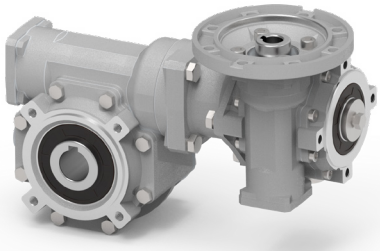




XX



KX



KK

Caratteristiche

La combinazione di due riduttori a vite senza fine comporta rendimenti molto bassi, ma l'elevata riduzione di velocità ottenuta in uno spazio ridottissimo rende comunque interessante, e a volte insosti- tuibile, questa soluzione.
I riduttori a vite senza fine combinati sono disponibili nelle serie KX, XX e KK.

Le serie KX e KK sono disponibili esclusivamente nella versione p.a.m.

La serie XX è invece disponibile nella versione alberata XXA e nelle due versioni con predisposizione attacco motore in forma compatta XXC o con campana e giunto XXF.

Sono forniti con albero cavo di serie ed esiste un'ampia gamma di accessori: seconda entrata, cuscinetti conici sulla corona, flangia uscita, albero lento con 1 o 2 sporgenze, limitatore di coppia con cavo passante, braccio di reazione.

Characteristics

The combination of two worm gearboxes provides very low efficiency, however the fact that substantial reduction in speed can be obtained in an extremely reduced space makes this solution very interesting and sometimes irreplaceable. Combined worm gearboxes are available in series: KX , XX and KK.

The KX and KK series are available for IEC version only.

The XX series is available in the XXA version with shaft and in two versions with motor coupling: XXC (compact) and XXF (with bell and joint).

The hollow shaft is supplied as standard. A broad range of accessories is avalable:
second input, tapered roller bearings on the worm wheel, output flange, single or double extended output shaft, torque limiter with through hollow shaft, torque arm.

Merkmale

Die Kombination zweier Schneckengetriebe bringt sehr niedrigen Wirkungsgrad mit sich, es handelt sich jedoch um eine interessante und manchmal unersetzbare Lösung, weil hohe Drehzahlverringerung in einem beträchtlich reduzierten Raum erhalten werden kann. Kombinierte Schneckengetriebe sind in folgende Serien erhältlich: KX, XX und KK.
Die Serien KX und KK sind nur mit IEC-Motoranbau verfügbar.

Die Serie XX ist mit Welle (XXA Version), oder mit Kupplung für Motoranschluss (XXC kompakt und XXF mit Glocke und Verbindsstück) lieferbar.

Die Hohlwelle gehört zur serienmäßigen Ausstattung. Eine breite Auswahl an Zubehör ist erhältlich: zweiter Antrieb, Kegelrollenlager auf Schneckenrad, Abtriebs- flansch, Standard oder doppelseitig herausrangende Abtriebswelle, Drehmomentbegrenzer mit durchgehender Hohlwelle, Drehmomentstütze.

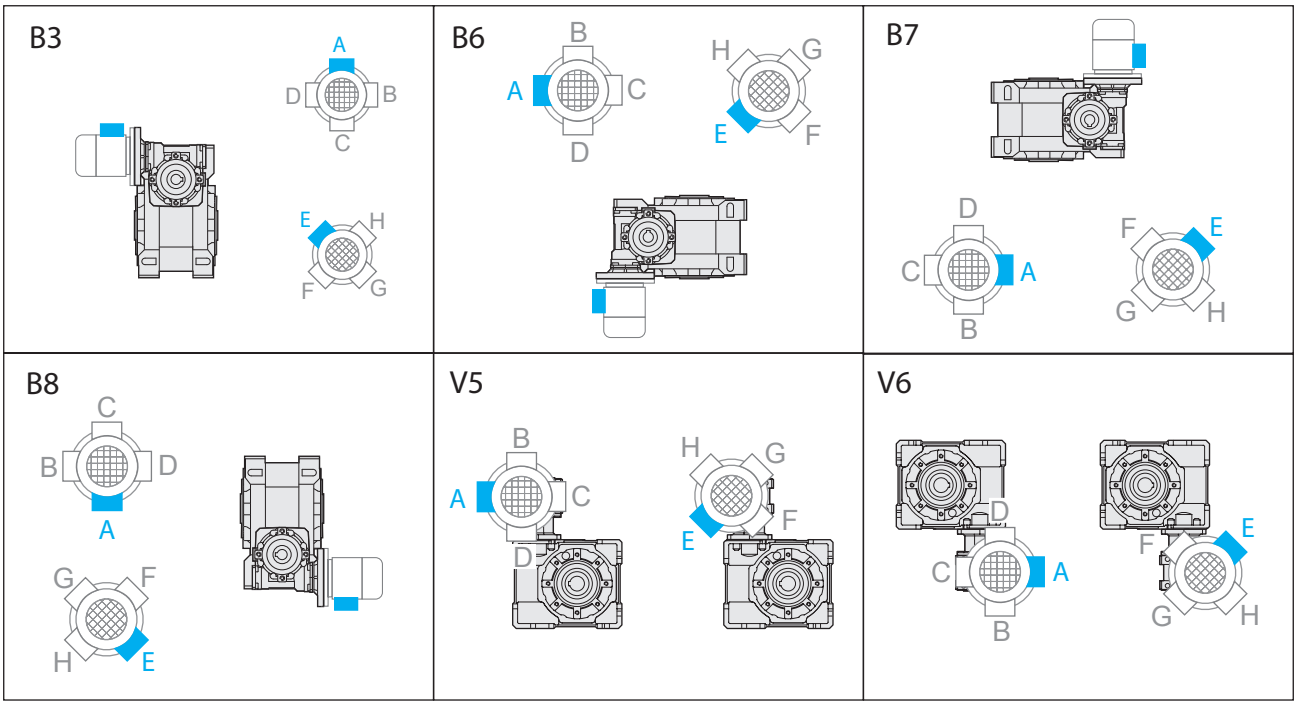
Posizione morsettiera — *Terminal board position* — Lage des Klemmenkastens



Specificare sempre in fase di ordinazione la posizione di montaggio e la forma costruttiva.
Posizione morsettiera v. pag. E21-E22 (PM=1; PM=2)

Mounting position always to be specified when ordering.
Terminal board position see page E21-E22 (PM=1; PM=2)

Bei der Bestellung immer die gewünschte Montageposition und Bauform angeben.
Lage der Klemmenkaste Seite E21-E22 (PM=1; PM=2)

Lubrificazione

I riduttori a vite senza fine combinati sono forniti completi di lubrificante sintetico a base PAG con indice di viscosità ISO VG320. Si raccomanda di precisare sempre in fase di ordine la forma costruttiva e la posizione di lavoro desiderata.

Per ulteriori dettagli consultare pag. A19 paragrafo “Lubrificazione”.

Lubrication

Combined worm gearboxes are supplied with synthetic lubricant, PAG base, viscosity index ISO VG320. Required version and mounting position always to be specified when ordering.

For more details, see page A19, paragraph “Lubrication”.

Schmierung

Kombinierte Schneckengetriebe werden mit synthetischem Schmiermittel auf PAG Basis und Viskosität Index ISO VG320 geliefert.
Im Auftrag sind immer Einbaulage und Bauform anzugeben.

Weitere Einzelheiten finden Sie auf Seite A19, Absatz Schmierung.

Limitatore di coppia cavo passante

Concepito per lavorare a bagno d'olio, il dispositivo risulta affidabile nel tempo ed è esente da usura se non viene mantenuto in condizioni prolungate di slittamento (condizione che si verifica quando la coppia presenta valori superiori a quelli di taratura).
La taratura è facilmente regolabile dall'esterno attraverso il serraggio di una ghiera autobloccante che porta a compressione le 4 molle a tazza disposte tra loro in serie.

Il dispositivo non consente:
- l'impiego di cuscinetti a rulli conici in uscita
- funzionamento prolungato in condizioni di slittamento.

Nella tabella seguente vengono riportati i valori delle coppie di slittamento M_{2S} in funzione del n° di giri della ghiera.

Torque limiter with through hollow shaft

Designed to be working in oil bath, the device is reliable over time and is not subject to wear unless in case of operation with prolonged slipping (it occurs when the torque values are higher than the calibration values). Calibration can be easily adjusted from outside by tightening of the self-locking ring nut, which causes the compression of the 4 Belleville washers arranged in series.

The device does not go together with:
- *the use of tapered roller bearings at output*
- *prolonged operation under slipping conditions*

The following table shows the values of M_{2S} slipping torques depending on the number of revolutions of the ring nut.

Drehmomentbegrenzer mit durchgehender Hohlwelle

Er ist zuverlässig und verschleißfrei (nur im Falle eines dauerhaften Rutschens entsteht Verschleiß, hier ist das Drehmoment größer als der eingestellte Eichwert).
Die Eichung kann mühelos von aussen durch das Anziehen einer selbstsperrenden Mutter ausgeführt werden, dadurch wird der Druck auf die 4 wechselseitig angeordneten Tellerfedern erhöht.

Die Vorrichtung sieht das folgende nicht vor:
- die Verwendung von Kegelrollenlager am Abtrieb
- Längerer Rutschbetrieb

Die nachstehende Tabelle zeigt die Werte der Rutschmomente M_{2S} abhängig von der Anzahl der Umdrehungen der Mutter.
Die Eichwerte weisen ±10% Toleranz.

63/110															
63/130															

I valori di taratura presentano una tolleranza del ±10% e si riferiscono ad una condizione statica.
In condizioni dinamiche è da notare che la coppia di slittamento assume valori diversi a seconda del tipo e/o modalità in cui si verifica il sovraccarico: con valori maggiori in caso di carico uniformemente crescente rispetto a volori più contenuti in seguito al verificarsi di picchi improvvisi di carico.
NOTA: quando si supera il valore di taratura si ha slittamento. Il coefficiente di attrito tra le superfici di contatto da statico diventa dinamico e la coppia trasmessa cala del 30% circa.
È quindi opportuno prevedere uno stop per poter ripartire al valore di taratura iniziale.

Calibration values feature a ±10% tolerance and refer to static conditions.
Under dynamic conditions the values of the slipping torque will change according to the type of overload: the values are higher if the load increase is uniform; the values are lower if sudden load peaks occur.

NOTE: *Slipping occurs when the setting values are exceeded.*
The friction coefficient between the contact surfaces from static becomes dynamic and the transmitted torque is approx. 30% lower.
It is advisable to have a stop first in order to have a restart based on the initial setting value.

Auf und beziehen sich auf statische Bedingungen.
Unter dynamischen Bedingungen hat das Rutschmoment verschiedene Werte je nach Art der Überbelastung. Die Werte sind höher, wenn die Belastung gleichmäßig zunimmt; sie sind niedriger im Falle von plötzlichen Belastungsspitzen.

BEMERKUNG: Rutschen tritt auf, wenn die eingestellten Werte überschritten werden. Der Reibungsfaktor zwischen den Berüehrungsflächen wird dynamisch anstatt statisch und das übertragene Drehmoment sinkt um ca. 30%.
Es ist daher ratsam, vor dem erneuten Anfahren anzuhalten, um die ursprünglichen Drehmomentwerte zu erreichen.

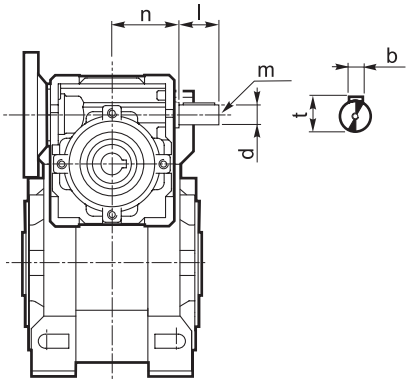
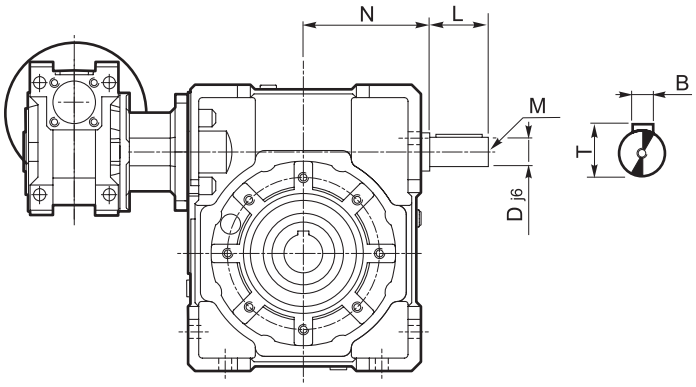
Double extended worm shaft design

Versionen mit Doppelseitig Herausragender Schneckenwelle

SeA1



SeA2



L' entrata supplementare del riduttore in uscita (SeA2) non può essere utilizzata come comando in quanto il relativo movimento risulta impedito dalla irreversibilità del primo riduttore. Utilizzato come asse condotto, avrà veliocità corrispondente a quella di ingresso ridotta del rapporto del primo riduttore.

The second input shaft of the output gearbox (SeA2) can not be utilized as a drive because its motion will be stopped by the reversibility of the first gearbox. If utilized as a drive shaft its speed will be equal to the input speed decreased by the ratio of the first gearbox.

Die verlängerte Schneckenwelle des zweiten Getriebes (SeA2) kann nicht als Antrieb verwendet werden, da die Selbshemmung des ersten Getriebes entgegengewirkt.
Wird sie als Abtriebswelle verwendet, besitzt sie eine um die Untersetzung des ersten Getriebes entsprechend reduzierte Drehzahl und Drehmoment.

RIDUTTORI A VITE SENZA FINE CON DOPPIA USCITA / *DOUBLE OUTPUT WORM GEARBOXES* / SCHNECKENGETRIEBE MIT ZWEI AUSGANGSWELLEN

VM

Caratteristiche

La serie di vite senza fine con doppia uscita comprende riduttori costruiti appositamente per soddisfare delle specifiche esigenze di automazione.
Il cinematismo, composto da una vite senza fine e due corone, consente di disporre, all'uscita, di due alberi cavi con una rotazione sincrona controrotante.
La motorizzazione può essere effettuata tramite motori elettrici o motovariatori provvisti di una flangia di fissaggio dimensionata a norme IEC.

- **Corpo e flange**
  Costruiti in alluminio e verniciati colore BLU RAL 5010
- **Vite senza fine**
  In acciaio legato. Indurita tramite cementazione e tempra e finita di rettifica
- **Corona**
  Fascia dentata in bronzo GcuSn12 UNI 7013 riportata di fusione su mozzo in ghisa G20 UNI 5007
- **Cuscinetti**
  Sulla vite e sulle due uscite sono montati cuscinetti a rulli conici
- **Lubrificazione**
  Normalmente i riduttori vengono forniti privi di lubrificante. Su richiesta possono essere forniti con lubrificante sintetico

Characteristics

Double output worm gearboxes series includes gearboxes specially manufactured to comply with specific requirements.
The kinematic motion is carried out by means of a wormshaft and two wormwheels in order to have two output shafts with a synchronous rotation.
These gearboxes can be assembled to electric motors or moto variators fully comply with the IEC specifications.

- ***Casing and flanges***
  Made from aluminium and painted BLUE RAL 5010
- ***Worm screw***
  Made from alloy steel. Hardened and case-hardened then finished by grinding
- ***Worm wheel***
  UNI 7013 GcuSn12 bronze toothed band. Inserted by casting on UNI 5007 G20 cast-iron hub.
- ***Bearings***
  Taper roller bearings are mounted on the screw and on the two outputs
- ***Lubrication***
  Gearboxes are normally supplied without lubricant. However, they can be supplied with synthetic lubricant on request

Merkmale

Bei der Schneckengetriebe mit Zwei Ausgangswellen Serie handelt es sich um Schneckengetriebe, die für spezielle Antriebsaufgaben eingesetzt werden.
Der Aufbau besteht aus einer Schneckewelle und zwei Schneckenräder umgewandelt. Der Antrieb erfolgt durch IEC Normmotoren oder Verstellgetriebemotoren.

- **Gehäuse und Flansche**
  Aus Aluminium gefertigt und mit Farbe BLAU RAL 5010 lackiert
- **Schnecke**
  Aus legiertem Stahl. Gehärtet durch Einsatzhärtung und Abschreckhärtung mit Fertigschliff
- **Zahnkranz**
  Zahnband aus Bronze GcuSn 12 UNI 7013, aufgegossen auf Nabe aus Gusseisen G20 UNI 5007
- **Lager**
  Auf der Schnecke und auf den beiden Abtrieben werden Kegelrollenlager montiert.

Schmierung
Normalerweise werden die Getriebe ohne Schmiermittel geliefert. Auf Anfrage können sie mit synthetischem Schmiermittel geliefert werden

Carichi radiali e assiali

Nella tabella sono indicati i valori, espressi in N, dei carichi radiali e assiali ammissibili su ogni singola uscita.
Il carico radiale F_{r2} si considera applicato ad una distanza dalla battuta dell'albero cavo pari al valore del diametro.
I valori indicati hanno come limite la struttura del riduttore, perciò non variano al diminuire della velocità, cosa che normalmente avviene quando il limite è riferito ai cuscinetti.

Radial and axial loads

In the table, the permissible radial and axial loads for each individual output are shown as N.
The radial load F_{r2} should be considered as applied at a distance from the shaft shoulder equal to the diameter figure.
The listed values are limited by the gear drive structure, therefore, they will not change as the speed decreases, which is normally the case when bearings are the limit reference.

Radial und Axial Belastungen

In der Tabelle werden die Werte der auf jedem einzelnen Abtrieb zulässigen Radial- und Axialbelastungen in N angegeben.
Hinsichtlich der radialen Belastung F_{r2} wird von einem Abstand vom Anschlag der Hohlwelle ausgegangen, der dem Wert des Durchmessers entspricht.
Die angegebenen Werte werden durch die Struktur des Getriebes beschränkt und verändern sich daher bei Reduzierung der Drehzahl nicht. Dies ist normalerweise dann der Fall, wenn der Grenzwert sich auf die Lager bezieht.

Principio di funzionamento del variatore

Si tratta di una trasmissione epicicloidale a rapporto variabile.
Quando il motore aziona il solare (5-6), i satelliti (8) sono indotti a ruotare sul proprio asse e, contemporaneamente, per effetto del vincolo con la pista esterna fissa (7) e la pista esterna mobile (9), ad un movimento di rivoluzione che trascina in rotazione il portasatelliti (albero uscita).
Variando la posizione assiale della pista esterna mobile (9) tramite la vite di comando, l'anello portasfere (14) e la camma fissa (15), i satelliti sono costretti a variare la loro posizione radiale di rivoluzione. In tal modo i diametri di rotolamento cambiano, così come la velocità angolare dell'albero uscita.
Quando il contatto di rotolamento con le piste esterne (7) (9) si trova verso il centro del satellite (8), la velocità di rivoluzione è più bassa: l'albero uscita ruoterà più lentamente ma avrà disponibile un maggior momento torcente.

Attenzione
La regolazione della velocità si può effettuare SOLO col variatore in funzione, MAI a macchina ferma.

Variator operating principle

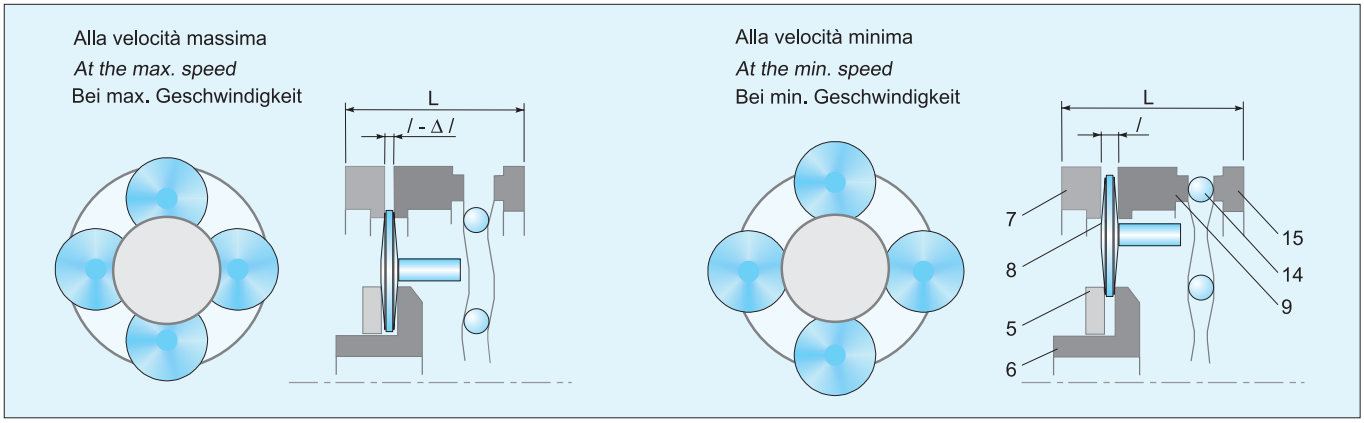
The mechanical variator is based on an epicyclic transmission for variable ratios. The motor rotates the solar rings (5-6) which rotate the satellites (8). In turn these are in contact with the fixed outer ring (7) and external mobile ring (9). The satellites rotate around their axes while simultaneously originate the rotation of the satellite carrier (output shaft).
When the rolling contact point of the outer rings (7) (9) is near the center of satellites (8) the output speed will reduce: the output shaft will rotate more slowly thus increasing the output torque value.

Warning
Speed adjustment is only possible when variator is running, never adjust speed while variator is stationary.
This will result in damage to the variator.

Funktionsprinzip des Verstellgetriebes

Das Verstellgetriebe ist ein Planetengetriebe mit verstellbarem Untersetzungsverhältnis.
Der Motor treibt das Sonnenrad (5-6) an. Die Drehbewegung wird auf die Planetenräder (8) übertragen. Die Verbindung zwischen der unbeweglichen (7) und der beweglichen (9) äußeren Laufbahn überträgt die Drehbewegung an die Abtriebswelle.
Durch die Verschiebung des Kugelringes (14) und der Nocke (15) ändert sich die Axiallage der beweglichen Laufbahn (9) und die Radiallage der Planetenräder. Auf diese Weise ändern sich den Rollendurchmesser und die Winkelgeschwindigkeit der Abtriebswelle.
Verschiebt sich der Kontaktpunkt zwischen den Planetenrädern (7) und der äußeren Laufbahn (9) gegen das Zentrum der Planetenräder, sinkt die Ausgangsdrehzahl und das Drehmoment steigt.

Vorsicht
Die Geschwindigkeit darf nur verstellt werden, wenn das Verstellgetriebe im Betrieb ist und nicht wenn es still steht. Andernfalls kommt es zu einer Beschädigung des Verstellgetriebes.



Variatore

I variatori meccanici serie N sono in alluminio nelle grandezze 003, 005, 010, 020, 030, 050 per potenze da 0.18 kW a 4 kW.

Variators

The mechanical variators N Series size 003, 005, 010, 020, 030, and 050 power range 0.18 kW to 4kW are manufactured in aluminium.

Verstellgetriebe

Die mechanischen Verstellgetriebe Serie N in den Größen 003, 005, 010, 020, 030 und 050 für Leistungen von 0.18kW bis 4kW, sind aus Aluminium gefertigt.

Caratteristiche

- La carcassa in alluminio, oltre ad una migliore estetica, comporta un minor peso del variatore rendendone più convenienti applicazioni e trasporti.
- Sul modulo base è possibile montare, in modo semplice e veloce, flangia uscita o piede, a seconda delle necessità. Questo riduce i volumi di stoccaggio ed i tempi di consegna.
- Il lato di entrata del variatore è chiuso, parte integrale col corpo: questo rende più facile l'installazione ed elimina totalmente la possibilità di perdite d'olio.
- È previsto, come standard, il collegamento a motori a dimensioni IEC forma B5.
- Il tappo di scarico olio è del tipo a magnete: la lubrificazione più pulita consente intervalli di manutenzione più lunghi.
- Funzionamento in bagno d'olio, silenzioso, con elevato rendimento ed esente da vibrazioni.
- Il funzionamento è possibile in entrambi i sensi di rotazione con entrata ed uscita concordi.
- Campo di variazione 1 - 6.
- L'albero di comando è bisporgente ed è quindi accessibile, per la manovra, da entrambe le estremità.

Characteristics

- *The alluminium housing benefits weight reduction for more convenient applications and transportation.*
- *The simple design allows both foot or flange mounting to standard unit, reducing stocking levels and allowing quick delivery.*
- *The closed input flange is an integral part of the variator casing for easy installation and prevents possibility of oil leaks.*
- *IEC B5 motor connections available as standard.*
- *The magnetic breather plug maintains a clean lubricant and extends maintenance intervals.*
- *The oil bath operation provides high efficiency for noiseless and vibration free running.*
- *The unit can operate in both directions, input and output shafts rotate in the same direction.*
- *Range of variation 1 - 6.*
- *The double extended drive shaft allows easy installation from both sides.*

Merkmale

- Dank dem Gehäuse aus Aluminium ist das Verstellgetriebe sehr leicht, was zur erleichterten Anwendung und Transport dient.
- Auf das Grundmodul können entweder Abtriebsflansch oder Fuß montiert werden. Das bringt Raumersparnis und schnellere Lieferzeit mit sich.
- Die Antriebsseite ist geschlossen und integrales Bestandteil des Gehäuses: Installation ist einfacher und Ölverluste sind ausgeschlossen.
- Standard-Anbau zu IEC B5 Motoren.
- Magnet-Ölablassschraube: die reinigere Schmierung erlaubt längere Wartungsintervalle.
- Betrieb im Ölbad ist geräuschlos, mit erhöhter Leistung und vibrationsfrei.
- Betrieb ist in beide Drehrichtungen möglich, mit Antriebs- und Abtriebswellen in derselber Richtung drehend.
- Verstellbereich 1 - 6.
- Die Welle für das Steuer-Handrad ist beidseitig herausgeführt, sodass es von beiden Seiten bedient werden kann.

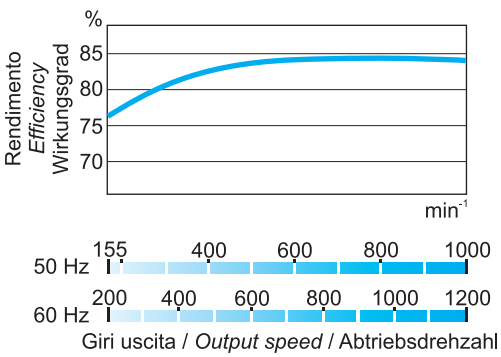
Il diagramma A riporta i valori indicativi del rendimento del variatore alle varie velocità in uscita n_2 espresse in rpm e il diagramma B indica la percentuale di carico sul motore.

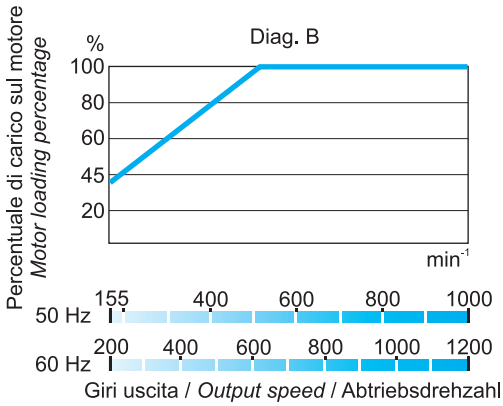
Diagram A shows the indicative value of efficiency in relation to output speed n_2 expressed in rpm. Diagram B shows the percentage of motor output power utilized.

Diagramm A zeigt die Richtwerte des Wirkungsgrads in Abhängigkeit zur n_2 in rpm. Diagramm B zeigt den Prozentsatz der abgegebenen Motorleistung.

Diag. A



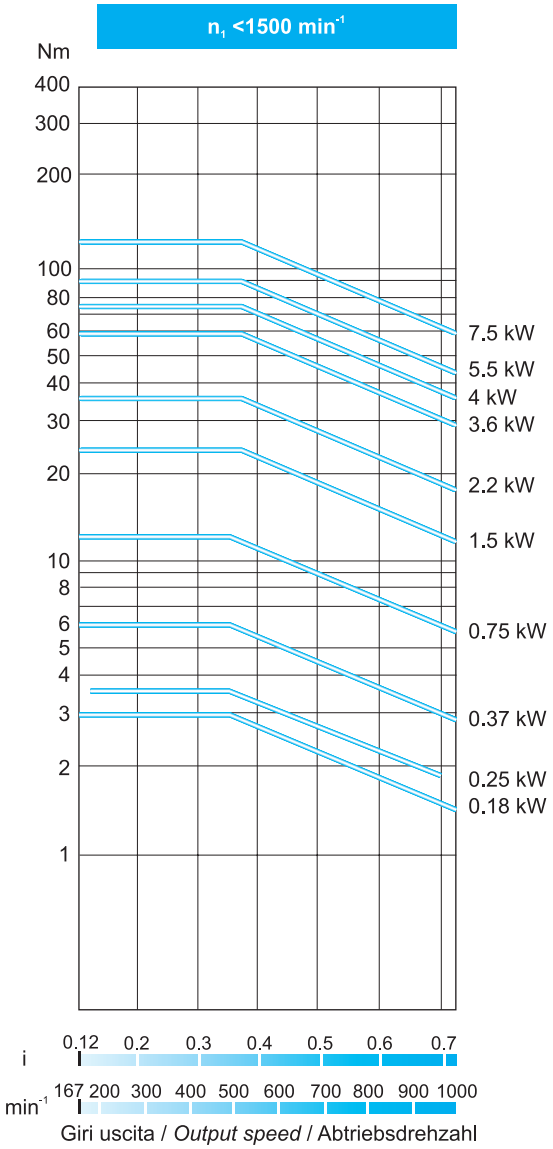
Diag. B

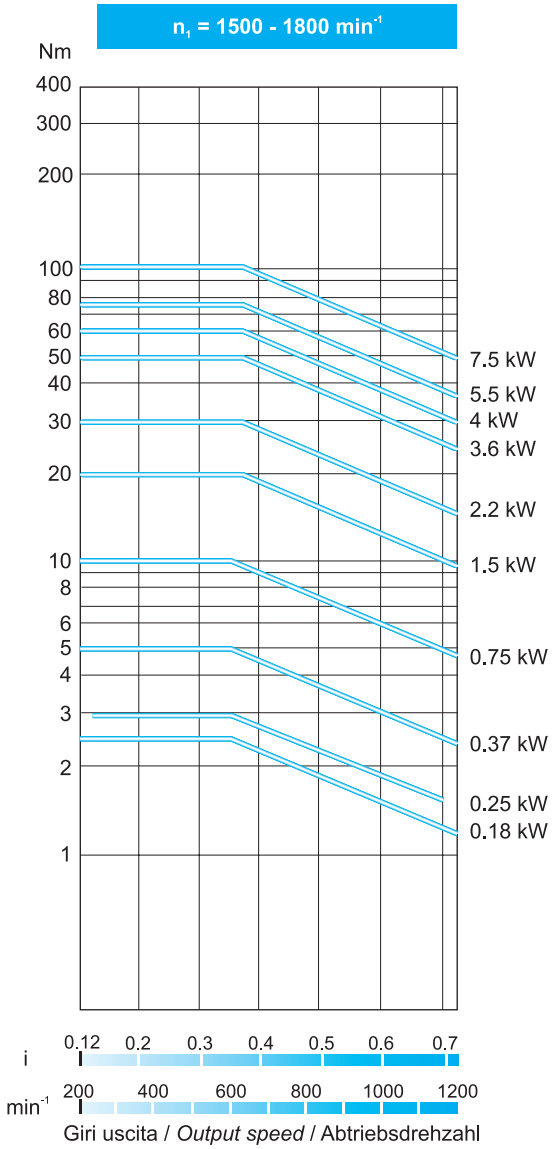


I diagrammi seguenti riportano le curve di coppia riferite alle varie potenze applicate e al numero di giri in entrata al variatore n_1 (rpm).

The following diagrams show the performance for output torque in relation to input power and input speed n_1 (rpm).

Die folgenden Diagramme zeigen die Drehmomentkurven bezüglich Leistung und Antriebsdrehzahl.





Lubrificazione

I variatori vengono forniti completi di lubrificante. Dopo il piazzamento del variatore assicurarsi che il livello del lubrificante sia visibile dall'apposita spia di livello effettuando eventuali rabbocchi se necessario, con un analogo lubrificante scelto fra quelli raccomandati in tabella.

Lubrication

The variators are supplied complete with lubricant. After the mounting pls make sure the oil can be seen through the oil level plug this to allow the filling up if necessary. Oil has to be selected among the recommended ones.

Schmierung

Die Verstellgetriebe werden mit Schmiermittel geliefert. Nach Einbau des Verstellgetriebes ist der Ölstand durch das Schauglas zu prüfen. Wenn nötig, füllen Sie mit einem der empfohlenen Öle auf (siehe Tabelle).

VARIATORI UDL | *VARIATORS UDL* | VERSTELLGETRIEBE UDL

UDL

Principio di funzionamento del variatore

Si tratta di una trasmissione epicicloidale a rapporto variabile.
Quando il motore aziona il solare (5-6), i satelliti (8) sono indotti a ruotare sul proprio asse e, contemporaneamente, per effetto del vincolo con la pista esterna fissa (7) e la pista esterna mobile (9), ad un movimento di rivoluzione che trascina in rotazione il portasatelliti (albero uscita).
Variando la posizione assiale della pista esterna mobile (9) tramite la vite di comando, l'anello portasfere (14) e la camma fissa (15), i satelliti sono costretti a variare la loro posizione radiale di rivoluzione. In tal modo i diametri di rotolamento cambiano, così come la velocità angolare dell'albero uscita.
Quando il contatto di rotolamento con le piste esterne (7) (9) si trova verso il centro del satellite (8), la velocità di rivoluzione è più bassa: l'albero uscita ruoterà più lentamente ma avrà disponibile un maggior momento torcente.

Attenzione
La regolazione della velocità si può effettuare SOLO col variatore in funzione, MAI a macchina ferma.

Variator operating principle

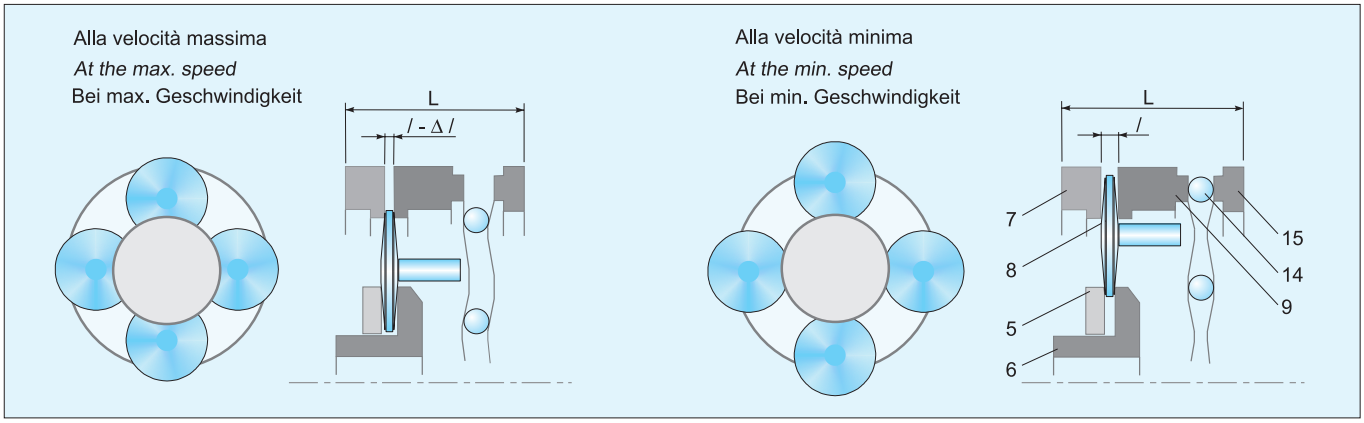
The mechanical variator is based on an epicyclic transmission for variable ratios. The motor rotates the solar rings (5-6) which rotate the satellites (8). In turn these are in contact with the fixed outer ring (7) and external mobile ring (9).
The satellites rotate around their axes while simultaneously originate the rotation of the satellite carrier (output shaft).
When the rolling contact point of the outer rings (7) (9) is near the center of satellites (8) the output speed will reduce: the output shaft will rotate more slowly thus increasing the output torque value.

Warning
Speed adjustment is only possible when variator is running, never adjust speed while variator is stationary.
This will result in damage to the variator.

Funktionsprinzip des Verstellgetriebes

Das Verstellgetriebe ist ein Planetengetriebe mit verstellbarem Untersetzungsverhältnis.
Der Motor treibt das Sonnenrad (5-6) an. Die Drehbewegung wird auf die Planetenräder (8) übertragen. Die Verbindung zwischen der unbeweglichen (7) und der beweglichen (9) äußeren Laufbahn überträgt die Drehbewegung an die Abtriebswelle.
Durch die Verschiebung des Kugelringes (14) und der Nocke (15) ändert sich die Axiallage der beweglichen Laufbahn (9) und die Radiallage der Planetenräder. Auf diese Weise ändern sich den Rollendurchmesser und die Winkelgeschwindigkeit der Abtriebswelle.
Verschiebt sich der Kontaktpunkt zwischen den Planetenrädern (7) und der äußeren Laufbahn (9) gegen das Zentrum der Planetenräder, sinkt die Ausgangsdrehzahl und das Drehmoment steigt.

Vorsicht
Die Geschwindigkeit darf nur verstellt werden, wenn das Verstellgetriebe im Betrieb ist und nicht wenn es still steht. Andernfalls kommt es zu einer Beschädigung des Verstellgetriebes.



Variatore

La gamma dei variatori di velocotà TRAMEC si completa con la nuova serie UDL, grandezze disponibili 002, 005 e 010.

Variators

The present range of Tramec speed reducers has been completed by the new UDL Series available in 3 sizes: 002,005 and 010

Verstellgetriebe

Die aktuelle Tramec Variatoren - Serie wird ergänzt durch die neue UDL Serie. Sie ist in den Größen 002, 005 und 010 erhältlich.

Caratteristiche

- La carcassa in alluminio, oltre ad una migliore estetica, comporta un minor peso del variatore rendendone più convenienti applicazioni e trasporti.
- Sul modulo base è possibile montare, in modo semplice e veloce, flangia uscita o piede, a seconda delle necessità. Questo riduce i volumi di stoccaggio ed i tempi di consegna.
- Il lato di entrata del variatore è chiuso, parte integrale col corpo: questo rende più facile l'installazione ed elimina totalmente la possibilità di perdite d'olio.
- È previsto, come standard, il collegamento a motori a dimensioni IEC forma B5.
- Il tappo di scarico olio è del tipo a magnete: la lubrificazione più pulita consente intervalli di manutenzione più lunghi.
- Funzionamento in bagno d'olio, silenzioso, con elevato rendimento ed esente da vibrazioni.
- Il funzionamento è possibile in entrambi i sensi di rotazione con entrata ed uscita concordi.

Characteristics

- *The alluminium housing benefits weight reduction for more convenient applications and transportation.*
- *The simple design allows both foot or flange mounting to standard unit, reducing stocking levels and allowing quick delivery.*
- *The closed input flange is an integral part of the variator casing for easy installation and prevents possibility of oil leaks.*
- *IEC B5 motor connections available as standard.*
- *The magnetic breather plug maintains a clean lubricant and extends maintenance intervals.*
- *The oil bath operation provides high efficiency for noiseless and vibration free running.*
- *The unit can operate in both directions, input and output shafts rotate in the same direction.*

Merkmale

- Dank dem Gehäuse aus Aluminium ist das Verstellgetriebe sehr leicht, was zur erleichterten Anwendung und Transport dient.
- Auf das Grundmodul können entweder Abtriebsflansch oder Fuß montiert werden. Das bringt Raumersparnis und schnellere Lieferzeit mit sich.
- Die Antriebsseite ist geschlossen und integrales Bestandteil des Gehäuses: Installation ist einfacher und Ölverluste sind ausgeschlossen.
- Standard-Anbau zu IEC B5 Motoren.
- Magnet-Ölablassschraube: die reinigere Schmierung erlaubt längere Wartungsintervalle.
- Betrieb im Ölbad ist geräuschlos, mit erhöhter Leistung und vibrationsfrei.
- Betrieb ist in beide Drehrichtungen möglich, mit Antriebs- und Abtriebswellen in derselber Richtung drehend.

Lubrificazione — *Lubrication* — Schmierung

I variatori vengono forniti completi di lubrificante. Dopo il piazzamento del variatore assicurarsi che il livello del lubrificante sia visibile dall'apposita spia di livello effettuando eventuali rabbocchi se necessario, con un analogo lubrificante scelto fra quelli raccomandati in tabella.

The variators are supplied complete with lubricant. After the mounting pls make sure the oil can be seen through the oil level plug this to allow the filling up if necessary. Oil has to be selected among the recommended ones.

Die Verstellgetriebe werden mit Schmiermittel geliefert. Nach Einbau des Verstellgetriebes ist der Ölstand durch das Schauglas zu prüfen. Wenn nötig, füllen Sie mit einem der empfohlenen Öle auf (siehe Tabelle).
